Professional Summary

Highly motivated and results-oriented Computer Vision Specialist with 5+ years of experience at Synthetica Global, specializing in the development and implementation of cutting-edge AI/ML solutions. Proven ability to leverage advanced techniques in deep learning, computer vision, and natural language processing to solve complex business problems. Proficient in R, Go, C++, TensorFlow, Keras, and Google Cloud Platform (GCP). Seeking a challenging role where I can contribute my expertise to drive innovation and deliver impactful results.

Education

University of Oxford, Oxford, UK | Master of Science (MSc), Computer Science, 2018 | *GPA: 3.9/4.0* | *Thesis: "Real-time Object Detection using Deep Convolutional Neural Networks"*

Technical Skills

Programming Languages: R, Go, C++, Python (NumPy, Pandas, Scikit-learn) **Deep Learning Frameworks:** TensorFlow, Keras, PyTorch **Cloud Platforms:** Google Cloud Platform (GCP) (Compute Engine, Cloud Storage, BigQuery), AWS (S3, EC2) **Databases:** SQL, NoSQL (MongoDB) **Computer Vision Libraries:** OpenCV, scikit-image **Other:** Docker, Kubernetes, Git, Agile methodologies

Professional Experience

Computer Vision Specialist | Synthetica Global, London, UK | 2018 - Present * Developed and deployed a real-time object detection system for autonomous vehicles using TensorFlow and YOLOv5, resulting in a 15% improvement in accuracy and a 10% reduction in processing time. * Designed and implemented a novel deep learning model for image segmentation using U-Net architecture, achieving state-of-the-art results on a challenging medical image dataset. * Led a team of three engineers in the development of a facial recognition system for security applications, integrating the system with existing infrastructure and ensuring compliance with data privacy regulations. * Contributed to the development of a large-scale image classification system using TensorFlow and distributed training on GCP, processing millions of images daily. * Mentored junior engineers in best practices for software development and AI/ML model deployment.

Software Engineering Intern | InnovateTech Solutions, Oxford, UK | Summer 2017 * Developed a web application for data visualization using R Shiny, enabling users to interact with and analyze large datasets. * Implemented a RESTful API using Go to facilitate data exchange between different systems. * Contributed to the development of a machine learning model for fraud detection using scikit-learn.

AI/ML Projects

Real-time Object Tracking System: Developed a robust object tracking system using DeepSORT and YOLOv5, achieving high accuracy even in challenging scenarios with occlusion and rapid movement. Deployed on a Raspberry Pi for embedded applications. (GitHub: github.com/caelumstratton/object-tracking)

Image Captioning Model: Built a deep learning model for generating descriptive captions for images using a combination of Convolutional Neural Networks (CNNs) and Recurrent Neural Networks (RNNs). Achieved state-of-the-art results on the MS COCO dataset. (GitHub: github.com/caelumstratton/image-captioning)

Anomaly Detection in Time Series Data: Developed an anomaly detection system for network traffic data using LSTM networks and unsupervised learning techniques. Successfully identified and flagged unusual patterns, improving system stability and security. (GitHub: github.com/caelumstratton/anomaly-detection)
