Kaelen Renwick (650) 555-1212 | kaelen.renwick@email.com | linkedin.com/in/kaelenrenwick | github.com/kaelenrenwick

Professional Summary

Highly motivated and results-oriented Machine Learning Research Fellow at Quantum Horizon Corp. with a proven track record in developing and deploying innovative AI/ML solutions. Expertise in designing, implementing, and evaluating machine learning models across diverse domains, including natural language processing, computer vision, and time series analysis. Strong analytical and problem-solving skills coupled with a deep understanding of statistical modeling and algorithm optimization. Seeking a challenging role leveraging advanced AI/ML techniques to drive impactful business outcomes.

Education

Stanford University, Stanford, CA * **Master of Science in Computer Science**, May 2021 * GPA: 3.9/4.0 * Thesis: "Novel Approaches to Few-Shot Learning using Meta-Learning Techniques" * **Bachelor of Science in Computer Science**, May 2019 * GPA: 3.8/4.0 * Minor: Mathematics

Technical Skills

- **Programming Languages:** Java, Python (NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch), R, Go
- **Machine Learning Frameworks:** Scikit-learn, TensorFlow, PyTorch, Hugging Face Transformers, XGBoost, LightGBM
- **Cloud Computing:** AWS (EC2, S3, Lambda, SageMaker), GCP (Compute Engine, Cloud Storage)
- **Databases:** SQL, NoSQL (MongoDB, Cassandra)
- **Big Data Technologies:** Spark, Hadoop
- **Version Control:** Git
- **Operating Systems:** Linux, macOS, Windows

Professional Experience

Machine Learning Research Fellow | **Quantum Horizon Corp.** | Mountain View, CA | June 2021 – Present * Developed and deployed a novel deep learning model for anomaly detection in high-frequency financial data, resulting in a 15% improvement in accuracy compared to existing methods. * Led the research and development of a new natural language processing pipeline for sentiment analysis, improving the model's performance by 10% F1-score. * Designed and implemented a scalable machine learning platform on AWS SageMaker for real-time prediction and inference. * Mentored junior researchers in best practices for data science and machine learning. * Contributed to the publication of two peer-reviewed research papers on advanced machine learning techniques.

Software Engineering Intern | **InnovateTech Solutions** | Palo Alto, CA | June 2020 – August 2020 * Developed and maintained several key features for a large-scale data processing application using Java and Spring Boot. * Implemented a new algorithm for optimizing data retrieval, resulting in a 20% improvement in query performance. * Collaborated with a team of engineers to design and implement a new microservice architecture.

AI/ML Projects

- **Sentiment Analysis of Social Media Data:** Developed a deep learning model using Hugging Face Transformers to analyze sentiment in social media data, achieving state-of-the-art results on a benchmark dataset. (GitHub repository available upon request)
- **Image Classification using Convolutional Neural Networks:** Implemented a convolutional neural network (CNN) for image classification using TensorFlow, achieving 95% accuracy on the CIFAR-10 dataset. (GitHub repository available upon request)
- **Time Series Forecasting using LSTM Networks:** Developed a long short-term memory (LSTM) network for time series forecasting, achieving superior performance compared to traditional time series models. (GitHub repository available upon request)
- **Recommendation System using Collaborative Filtering:** Built a collaborative filtering-based recommendation system using Python and Scikit-learn, demonstrating significant improvements in recommendation accuracy. (GitHub repository available upon request)
