Professional Summary

Highly motivated and results-oriented Machine Learning Research Fellow at Synthetica Global with a proven track record in developing and deploying innovative AI/ML solutions. Possessing a strong academic background from Stanford University and expertise in various programming languages (Go, Java, C++) and ML frameworks (TensorFlow, Scikit-learn), coupled with experience utilizing cloud computing platforms (GCP). Seeking a challenging role where I can leverage my skills and experience to contribute to the advancement of AI and its applications in solving complex real-world problems.

Education

Stanford University, Stanford, CA | * **Master of Science in Computer Science**, Specialization in Artificial Intelligence (May 2022) GPA: 3.9/4.0 * Relevant Coursework: Deep Learning, Machine Learning, Natural Language Processing, Computer Vision, Reinforcement Learning, Distributed Systems, Algorithm Design and Analysis. * **Bachelor of Science in Computer Science**, (May 2020) GPA: 3.8/4.0 * Thesis: "Novel Approaches to Anomaly Detection in High-Dimensional Time Series Data using Recurrent Neural Networks"

Technical Skills

Programming Languages: Go, Java, C++, Python (NumPy, Pandas, SciPy) **Machine Learning Frameworks:** TensorFlow, Keras, PyTorch, Scikit-learn, XGBoost **Cloud Platforms:** Google Cloud Platform (GCP) – Compute Engine, Cloud Storage, BigQuery, Dataflow **Databases:** SQL, NoSQL (MongoDB) **Tools & Technologies:** Docker, Kubernetes, Git, Agile methodologies

Professional Experience

Machine Learning Research Fellow | Synthetica Global | Mountain View, CA | June 2022 – Present

- Developed and implemented a novel deep learning model for image recognition, resulting in a 15% improvement in accuracy compared to the existing system.
- Designed and deployed a real-time anomaly detection system using TensorFlow and GCP, significantly reducing false positives by 20%.
- Contributed to the development of a large-scale recommendation engine using collaborative filtering and matrix factorization techniques.
- Conducted extensive research on the application of reinforcement learning to optimize resource allocation in cloud computing environments.
- Collaborated with a team of engineers and researchers to publish a research paper on "Improving the Robustness of Deep Learning Models to Adversarial Attacks."

Software Engineering Intern | InnovateTech Solutions | Palo Alto, CA | June 2021 – August 2021

- Developed and maintained several key features for a large-scale e-commerce platform using Java and Spring Boot.
- Implemented a new microservice architecture to improve the scalability and performance of the platform.
- Contributed to the improvement of the platform's CI/CD pipeline using Docker and Kubernetes.

AI/ML Projects

Project 1: Anomaly Detection in Network Traffic

- Developed a deep learning model using LSTM networks to detect anomalous network traffic patterns.
- Achieved 95% accuracy in identifying malicious activities.
- Utilized TensorFlow and GCP for model training and deployment.

Project 2: Sentiment Analysis of Social Media Data

- Built a sentiment analysis model using natural language processing techniques.
- Achieved 88% accuracy in classifying the sentiment of tweets.
- Deployed the model as a REST API using Flask.

Project 3: Predictive Maintenance using Time Series Analysis

- Developed a predictive maintenance model for industrial equipment using time series analysis techniques.
- Achieved a 10% reduction in maintenance costs.
- Utilized Scikit-learn and XGBoost for model training.
