Professional Summary

Highly accomplished and results-oriented Principal Data Architect with 12+ years of experience in designing, developing, and implementing innovative AI/ML solutions for large-scale data environments. Proven ability to lead and mentor cross-functional teams, translating complex business requirements into robust and scalable data architectures. Expertise in leveraging cloud technologies (Microsoft Azure) and programming languages (R, Java, Go, Python) to build and deploy high-performing machine learning models. Passionate about applying cutting-edge AI techniques to solve challenging real-world problems and drive impactful business outcomes.

Education

- **Stanford University**, Stanford, CA – Master of Science in Computer Science, specializing in Artificial Intelligence (2011)
- **Stanford University**, Stanford, CA – Bachelor of Science in Computer Science (2009)

Technical Skills

- **Programming Languages:** R, Java, Go, Python (NumPy, Pandas, Scikit-learn, PyTorch), SQL
- **Cloud Platforms:** Microsoft Azure (Azure Databricks, Azure Machine Learning, Azure SQL Database, Azure Storage), AWS (basic familiarity)
- **Machine Learning Libraries & Frameworks:** Scikit-learn, PyTorch, TensorFlow (familiarity), Keras (familiarity)
- **Big Data Technologies:** Spark, Hadoop (familiarity)
- **Databases:** SQL Server, PostgreSQL, MySQL
- **Data Visualization:** Tableau, Power BI
- **Version Control:** Git

Professional Experience

Synthetica Global, Mountain View, CA – Principal Data Architect (2018 – Present)

- Led the design and implementation of a new AI-powered fraud detection system, resulting in a 25% reduction in fraudulent transactions within the first year.
- Architectured and deployed a scalable machine learning platform on Microsoft Azure, enabling rapid prototyping and deployment of new AI models.
- Mentored and guided a team of 5 junior data scientists in best practices for data engineering, model development, and deployment.
- Developed and implemented data governance policies and procedures, ensuring data quality and compliance.
- Successfully migrated legacy data warehouse to a cloud-based solution, improving data accessibility and reducing operational costs.

DataWise Solutions, Palo Alto, CA – Senior Data Scientist (2014 – 2018)

- Developed and deployed several machine learning models for various clients across different industries, including finance, healthcare, and retail.
- Conducted extensive data analysis and feature engineering to improve model accuracy and performance.
- Collaborated with cross-functional teams to define project scope, deliverables, and timelines.
- Presented findings and recommendations to clients in clear and concise manner.

Innovatech Corp, San Jose, CA – Data Scientist (2011 – 2014)

- Developed and implemented predictive models for customer churn and customer lifetime value.
- Performed A/B testing to optimize marketing campaigns and improve customer engagement.
- Contributed to the development of a new data analytics platform.

AI/ML Projects

- **Fraud Detection System (Synthetica Global):** Developed a real-time fraud detection system using anomaly detection techniques and deep learning models, deployed on Azure. Achieved 95% accuracy in identifying fraudulent transactions. (Detailed technical specifications available upon request)
- **Customer Churn Prediction (DataWise Solutions):** Built a predictive model to identify customers at high risk of churning, using logistic regression and random forest algorithms. Improved customer retention rate by 10%. (Detailed technical specifications available upon request)
- **Personalized Recommendation Engine (Innovatech Corp):** Developed a recommendation engine using collaborative filtering techniques, resulting in

a 15% increase in sales conversions. (Detailed technical specifications available upon request)
