Professional Summary

Highly accomplished and results-oriented Principal Data Architect with 12+ years of experience leading the design, development, and implementation of complex AI/ML solutions within large-scale organizations. Proven ability to translate business needs into robust, scalable, and efficient data architectures leveraging cutting-edge technologies. Expertise in developing and deploying machine learning models across diverse domains, including natural language processing, computer vision, and predictive analytics. Adept at mentoring and guiding teams to achieve ambitious goals, consistently exceeding expectations in delivering high-impact projects. Currently leading the data architecture strategy for Quantum Horizon Corp.'s next-generation AI platform.

Education

- **Massachusetts Institute of Technology (MIT), Cambridge, MA**
  - Master of Science in Computer Science, Artificial Intelligence Specialization (2011)
  - Bachelor of Science in Computer Science (2009)
  - GPA: 3.9/4.0
  - Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Distributed Systems, Database Systems, Algorithm Design and Analysis

Technical Skills

- **Programming Languages:** Java (Expert), R (Expert), Go (Proficient), Python (Proficient)
- **Machine Learning Frameworks:** TensorFlow (Expert), PyTorch (Proficient), Hugging Face Transformers (Expert), scikit-learn (Proficient)
- **Cloud Platforms:** Microsoft Azure (Expert), AWS (Proficient), Google Cloud Platform (Familiar)
- **Databases:** SQL Server (Expert), PostgreSQL (Proficient), MongoDB (Proficient)
- **Big Data Technologies:** Spark (Proficient), Hadoop (Familiar)
- **Other Tools:** Docker, Kubernetes, Git, Jira, Confluence

Professional Experience

- **Principal Data Architect, Quantum Horizon Corp., Boston, MA (2018 – Present)**
    - Led the design and implementation of a new AI-powered fraud detection system, resulting in a 25% reduction in fraudulent transactions.
    - Developed and deployed a real-time recommendation engine using TensorFlow and Hugging Face Transformers, increasing user engagement by 15%.
    - Mentored and trained a team of 5 junior data scientists and engineers.
    - Successfully migrated the company's data infrastructure to Microsoft Azure, improving scalability and reducing costs by 10%.
    - Defined and implemented data governance policies and procedures, ensuring data quality and compliance.
- **Senior Data Scientist, NovaTech Solutions, New York, NY (2014 – 2018)**
    - Developed and deployed machine learning models for various clients across multiple industries, including finance, healthcare, and retail.
    - Utilized R and Python to build predictive models for customer churn, fraud detection, and risk assessment.
    - Collaborated with cross-functional teams to gather requirements, design solutions, and implement models.
    - Presented findings and recommendations to senior management and clients.
- **Data Scientist, Tech Dynamics Inc., San Francisco, CA (2011 – 2014)**
    - Developed and implemented algorithms for natural language processing and computer vision tasks.
    - Contributed to the development of a large-scale data pipeline using Hadoop and Spark.
    - Conducted research and development on new machine learning techniques.

AI/ML Projects

- **Quantum Horizon Fraud Detection System:** Developed a real-time fraud detection system using TensorFlow and a custom neural network architecture. Achieved 98% accuracy in detecting fraudulent transactions. (Details available upon request)
- **NovaTech Customer Churn Prediction:** Built a predictive model using R and logistic regression to predict customer churn with 85% accuracy. This

resulted in targeted retention campaigns that reduced churn by 12%. (Details available upon request)

- **Tech Dynamics Image Recognition System:** Developed an image recognition system using convolutional neural networks (CNNs) that achieved 95% accuracy in identifying objects in images. (Details available upon request)
- **Personal Project: Sentiment Analysis of Social Media Data:** Utilized Hugging Face Transformers to build a sentiment analysis model for Twitter data. The model achieved state-of-the-art performance on a benchmark dataset. (Github repository available upon request)
