Professional Summary

Highly accomplished and results-oriented Principal Data Architect with 12+ years of experience leading the design, development, and implementation of complex AI/ML solutions at Veridian Dynamics. Proven ability to translate business needs into innovative technical strategies, leveraging cutting-edge technologies to deliver impactful results. Expertise in building and deploying large-scale machine learning models, data pipelines, and cloud-based infrastructure. Passionate about pushing the boundaries of AI and its application across diverse industries.

Education

Massachusetts Institute of Technology (MIT), Cambridge, MA |

Master of Science in Computer Science, Artificial Intelligence Focus | May 2011 |
GPA: 3.9/4.0 * Thesis: "Novel Applications of Deep Learning in Natural Language Processing for Enhanced Cybersecurity Threat Detection" * Relevant Coursework:
Advanced Machine Learning, Deep Learning, Natural Language Processing,
Computer Vision, Distributed Systems, Database Systems

University of California, Berkeley, CA | Bachelor of Science in Computer
Science | May 2009 | GPA: 3.7/4.0 * Dean's List (all semesters)

Technical Skills

Programming Languages: R, C++, Python, Java, SQL **Machine Learning**

Frameworks: PyTorch, TensorFlow, Hugging Face Transformers, scikit-learn,

XGBoost **Cloud Platforms:** Microsoft Azure (Azure Databricks, Azure Machine Learning, Azure DevOps), AWS (Amazon SageMaker, EC2, S3), GCP (Google Cloud

Dataproc, Vertex AI) **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB **Big**

Data Technologies: Hadoop, Spark, Kafka **Data Visualization:** Tableau, Power BI,

Matplotlib, Seaborn **Version Control:** Git

Professional Experience

Veridian Dynamics, Boston, MA | Principal Data Architect | June 2018 – Present

- * Led the design and implementation of a real-time fraud detection system using deep learning, resulting in a 25% reduction in fraudulent transactions.
- * Developed and deployed a large-scale recommendation engine using collaborative filtering and deep learning techniques, increasing user engagement by 15%.
- * Architected and implemented a cloud-based data pipeline using Azure Databricks and Azure Data Factory, improving data processing efficiency by 40%.
- * Mentored and guided a team of 10 data scientists and engineers.
- * Successfully secured \$5M in funding for new AI initiatives.

Innovatech Solutions, San Francisco, CA | Senior Data Scientist | June 2015 – June 2018

- * Developed and deployed several machine learning models for various clients across different industries, including finance, healthcare, and retail.
- * Designed and implemented data pipelines for processing large datasets using Hadoop and Spark.
- * Conducted A/B testing and model evaluation to ensure optimal performance.

AI/ML Projects

Real-time Fraud Detection System (Veridian Dynamics) | * Developed a deep learning model using PyTorch and Hugging Face Transformers to detect fraudulent transactions in real-time. * Achieved 95% accuracy in identifying fraudulent transactions. * Deployed the model on Azure using Azure Machine Learning.

Large-Scale Recommendation Engine (Veridian Dynamics) | * Developed a recommendation engine using collaborative filtering and deep learning techniques. * Improved user engagement by 15%. * Deployed the engine on Azure using Azure Databricks.

Cybersecurity Threat Detection System (MIT Thesis) | * Developed a novel deep learning model for detecting cybersecurity threats using natural language processing techniques. * Achieved 90% accuracy in identifying malicious activities.

Customer Churn Prediction Model (Innovatech Solutions) | * Developed a machine learning model to predict customer churn for a major telecommunications company. * Improved customer retention by 10%.
