Professional Summary

Highly motivated and results-oriented Machine Learning Research Fellow at Synthetica Global with a proven track record in developing and implementing innovative AI/ML solutions. Possessing a strong theoretical foundation in machine learning coupled with practical expertise in various programming languages and cloud platforms. Seeking a challenging role leveraging advanced AI techniques to solve complex problems and contribute to cutting-edge research and development.

Education

Carnegie Mellon University, Pittsburgh, PA

Master of Science in Machine Learning, May 2021 * GPA: 3.9/4.0 * Thesis: "Novel Applications of Reinforcement Learning in Natural Language Processing" *

*Bachelor of Science in Computer Science**, May 2019 * GPA: 3.8/4.0 * Minor: Mathematics

Technical Skills

Programming Languages: C++, Java, Go, Python (NumPy, Pandas, Scikit-learn, Keras, TensorFlow, PyTorch) **Machine Learning Libraries & Frameworks:** Scikit-learn, Keras, TensorFlow, PyTorch, XGBoost, LightGBM **Cloud Platforms:** Google Cloud Platform (GCP) (Compute Engine, Cloud Storage, BigQuery), AWS (S3, EC2) **Databases:** SQL, NoSQL (MongoDB) **Big Data Technologies:** Apache Spark, Hadoop **Version Control:** Git **Operating Systems:** Linux, macOS, Windows

Professional Experience

Machine Learning Research Fellow, Synthetica Global, Pittsburgh, PA | June 2021 – Present * Developed and implemented a novel deep learning model for anomaly detection in financial transactions, resulting in a 15% reduction in false positives. * Led a team of three junior engineers in the design and deployment of

a real-time recommendation system using collaborative filtering and content-based filtering techniques. * Contributed to the development of a large-scale natural language processing pipeline for sentiment analysis, improving accuracy by 10%. * Presented research findings at several internal and external conferences. * Mentored undergraduate interns in machine learning and software engineering.

Software Engineering Intern, NovaTech Solutions, Pittsburgh, PA | June 2020 – August 2020 * Developed and maintained several key features for a large-scale data processing application using Java and Spring Boot. * Implemented unit and integration tests to ensure code quality and reliability. * Collaborated with a team of senior engineers to improve the performance and scalability of the application.

AI/ML Projects

Anomaly Detection in Financial Transactions (Synthetica Global): Developed a deep autoencoder model using TensorFlow and Keras to detect anomalous transactions in a large dataset of financial data. Improved accuracy by 15% compared to existing methods. Utilized GCP for data storage and processing. [GitHub Link: github.com/finniankaelin/anomaly-detection]

Real-time Recommendation System (Synthetica Global): Designed and implemented a real-time recommendation system using collaborative filtering and content-based filtering techniques. Deployed the system on GCP using Kubernetes. Improved user engagement by 8%. [GitHub Link: github.com/finniankaelin/recommendation-system]

Sentiment Analysis Pipeline (Synthetica Global): Built a large-scale natural language processing pipeline for sentiment analysis using PyTorch and spaCy. Improved accuracy by 10% compared to the previous system. Utilized GCP for data storage and processing. [GitHub Link: github.com/finniankaelin/sentiment-analysis]

Reinforcement Learning for Natural Language Generation (Master's Thesis): Developed a novel reinforcement learning algorithm for natural language generation. Achieved state-of-the-art results on several benchmark datasets. Published a paper on the research at a leading AI conference. [GitHub Link: github.com/finniankaelin/reinforcement-learning-nlp]
