Professional Summary

Highly motivated and results-oriented Computer Vision Specialist with 5+ years of experience at Innovate AI Labs, specializing in the development and deployment of cutting-edge AI/ML solutions. Proven ability to design, implement, and optimize deep learning models for complex computer vision tasks. Expertise in leveraging cloud platforms (GCP) and utilizing various deep learning frameworks (TensorFlow/Keras, Hugging Face Transformers) to deliver high-impact projects. Passionate about pushing the boundaries of AI and contributing to innovative applications.

Education

- **Carnegie Mellon University**, Pittsburgh, PA
 - Master of Science in Robotics, May 2018
 - GPA: 3.9/4.0
 - Thesis: *Real-time Object Detection and Tracking using Deep Convolutional Neural Networks for Autonomous Navigation*
- **Carnegie Mellon University**, Pittsburgh, PA
 - Bachelor of Science in Computer Science, May 2016
 - GPA: 3.8/4.0
 - Minor: Mathematics

Technical Skills

- **Programming Languages:** Python (expert), Java (proficient), Go (intermediate)
- **Deep Learning Frameworks:** TensorFlow/Keras (expert), PyTorch (proficient), Hugging Face Transformers (expert)
- **Cloud Platforms:** Google Cloud Platform (GCP) (expert), Amazon Web Services (AWS) (intermediate)
- **Computer Vision Libraries:** OpenCV (expert), Scikit-image (proficient)
- **Databases:** SQL, NoSQL (MongoDB)
- **Version Control:** Git
- **Other:** Docker, Kubernetes, Agile methodologies

Professional Experience

- **Innovate AI Labs**, Pittsburgh, PA
 - **Computer Vision Specialist** | June 2018 – Present
 - Led the development and deployment of a real-time object detection system for autonomous vehicles, resulting in a 15% increase in accuracy and a 10% reduction in processing time.
 - Designed and implemented a novel deep learning model for image segmentation, improving the accuracy of medical image analysis by 20%.
 - Developed and maintained a robust pipeline for data annotation and preprocessing, significantly improving the efficiency of the data science team.
 - Mentored junior engineers in best practices for software development and AI/ML model deployment.
 - Contributed to the development of a new product feature using cutting-edge computer vision techniques, leading to a 25% increase in user engagement.
- **Tech Solutions Inc.**, Pittsburgh, PA
 - **Software Engineering Intern** | June 2017 – August 2017
 - Developed and implemented a Java-based application for data analysis and visualization.
 - Contributed to the development of a new software module using Agile methodologies.

AI/ML Projects

- **Real-time Object Detection for Autonomous Vehicles:** Developed a YOLOv5-based object detection model deployed on a Jetson Nano for real-time object detection in autonomous driving scenarios. Achieved 95% mAP on a custom dataset. (GitHub repository: github.com/aurorarenwick/autonomous-vehicle-object-detection)
- **Medical Image Segmentation using U-Net:** Implemented a U-Net architecture for semantic segmentation of medical images, achieving state-of-the-art performance on a public dataset. (GitHub repository: github.com/aurorarenwick/medical-image-segmentation)
- **Facial Recognition System with Liveness Detection:** Developed a facial recognition system incorporating liveness detection to prevent spoofing attacks. Achieved 99% accuracy in identifying genuine faces. (GitHub repository: github.com/aurorarenwick/facial-recognition-liveness)
- **Style Transfer using Neural Style Transfer:** Implemented a neural style transfer algorithm using TensorFlow/Keras to transfer the style of one image to another. (GitHub repository: github.com/aurorarenwick/neural-style-transfer)
