Professional Summary

Highly motivated and results-oriented Machine Learning Research Fellow at Aetherium Analytics with a proven track record of developing and deploying innovative AI/ML solutions. Possessing a strong theoretical foundation in machine learning complemented by practical experience in Python, PyTorch, Hugging Face Transformers, and cloud computing platforms like Microsoft Azure. Seeking a challenging role where I can leverage my expertise to contribute to cutting-edge research and development within a collaborative and dynamic environment.

Education

- **Massachusetts Institute of Technology (MIT), Cambridge, MA**
 - Doctor of Philosophy (Ph.D.), Electrical Engineering and Computer Science, May 2020
 - Thesis: "Novel Architectures for Robust and Explainable Deep Learning in Time Series Analysis"
 - GPA: 3.9/4.0
 - Relevant Coursework: Machine Learning, Deep Learning, Reinforcement Learning, Natural Language Processing, Computer Vision, Distributed Systems, Algorithm Design and Analysis

Technical Skills

- **Programming Languages:** Python (Expert), Java (Proficient), Go (Intermediate)
- **Machine Learning Frameworks:** PyTorch (Expert), TensorFlow (Proficient), Hugging Face Transformers (Expert), scikit-learn (Proficient)
- **Cloud Computing:** Microsoft Azure (Expert), AWS (Basic)
- **Databases:** SQL, NoSQL (MongoDB)
- **Big Data Technologies:** Spark, Hadoop (Basic)
- **Version Control:** Git

Professional Experience

- **Machine Learning Research Fellow, Aetherium Analytics, Boston, MA** | June 2020 – Present
 - Led the development and deployment of a novel deep learning model for anomaly detection in financial transactions, resulting in a 15% reduction in false positives.
 - Designed and implemented a scalable data pipeline using Azure Data Factory and Databricks for processing large-scale datasets.
 - Contributed to the development of a new internal library for deploying and monitoring machine learning models in production.
 - Mentored junior researchers in best practices for data science and machine learning.
 - Published research findings at leading conferences, including NeurIPS and ICML.
- **Research Assistant, MIT Computer Science and Artificial Intelligence Laboratory (CSAIL), Cambridge, MA** | September 2016 – May 2020
 - Assisted Professor David Chen in research on explainable AI and fairness in machine learning.
 - Developed and implemented algorithms for improving the interpretability of deep learning models.
 - Conducted extensive experiments and analyzed results to validate research hypotheses.
 - Presented research findings at internal lab meetings and conferences.

AI/ML Projects

- **Anomaly Detection in Financial Transactions:** Developed a deep learning model using LSTM networks and autoencoders to detect anomalies in high-frequency financial transactions. Achieved 95% accuracy in detecting fraudulent transactions. (Python, PyTorch, Azure)
- **Natural Language Processing for Sentiment Analysis:** Built a sentiment analysis model using Hugging Face Transformers to classify customer reviews. Achieved 92% accuracy in classifying positive and negative reviews. (Python, Hugging Face Transformers)
- **Image Classification using Convolutional Neural Networks:** Developed a CNN model for classifying images of different types of plants. Achieved 90% accuracy in classifying 10 different plant species. (Python, TensorFlow)
- **Reinforcement Learning for Robotics:** Developed a reinforcement learning agent using DQN to control a simulated robotic arm. The agent successfully learned to pick and place objects with 98% success rate. (Python, PyTorch)
