Professional Summary

Highly motivated and results-oriented Machine Learning Research Fellow at Synthetica Global with a proven track record in developing and deploying innovative AI/ML solutions. Expertise in deep learning, natural language processing, and computer vision, coupled with strong programming skills in Python, Java, and Go, and proficiency in cloud computing platforms like Google Cloud Platform (GCP). Seeking a challenging role where I can leverage my skills and experience to contribute to the advancement of cutting-edge AI technologies.

Education

Carnegie Mellon University, Pittsburgh, PA * **Master of Science in Machine Learning**, May 2021 * GPA: 3.9/4.0 * Thesis: "Novel Approaches to Unsupervised Anomaly Detection in Time Series Data" * **Bachelor of Science in Computer Science**, May 2019 * GPA: 3.8/4.0 * Minor: Mathematics

Technical Skills

- **Programming Languages:** Python (expert), Java (proficient), Go (intermediate), C++ (basic)
- **Machine Learning Frameworks:** TensorFlow (expert), PyTorch (expert), Keras (proficient), scikit-learn (proficient)
- **Cloud Platforms:** Google Cloud Platform (GCP) (expert), Amazon Web Services (AWS) (intermediate)
- **Databases:** SQL, NoSQL (MongoDB, Cassandra)
- **Big Data Technologies:** Apache Spark, Hadoop
- **Version Control:** Git
- **Operating Systems:** Linux (expert), macOS (proficient), Windows (basic)

Professional Experience

Machine Learning Research Fellow | Synthetica Global | Pittsburgh, PA | June 2021 – Present

- Led the development and implementation of a novel deep learning model for anomaly detection in financial transactions, resulting in a 15% reduction in false positives.
- Designed and implemented a scalable data pipeline using GCP for processing and analyzing large datasets (terabytes).
- Contributed to the development of a new natural language processing model for sentiment analysis, achieving state-of-the-art results on a benchmark dataset.

- Mentored junior researchers in the application of machine learning techniques to real-world problems.
- Published research findings in peer-reviewed conferences and journals.

Software Engineering Intern | NovaTech Solutions | Pittsburgh, PA | June 2020 – August 2020

- Developed and maintained several key features for a large-scale data processing application using Java and Spring Boot.
- Implemented unit and integration tests to ensure code quality and reliability.
- Collaborated with a team of engineers to design and implement a new microservice architecture.

AI/ML Projects

- **Unsupervised Anomaly Detection in Time Series Data:** Developed a novel deep learning model for unsupervised anomaly detection in time series data, achieving state-of-the-art performance on several benchmark datasets. (GitHub repository available upon request)
- **Sentiment Analysis of Social Media Data:** Developed a deep learning model for sentiment analysis of social media data, achieving state-of-the-art results on a benchmark dataset. (GitHub repository available upon request)
- **Image Classification using Convolutional Neural Networks:** Developed a convolutional neural network for image classification, achieving high accuracy on the ImageNet dataset. (GitHub repository available upon request)
- **Natural Language Generation using Recurrent Neural Networks:** Developed a recurrent neural network for natural language generation, generating human-quality text. (GitHub repository available upon request)
