Professional Summary

Highly accomplished and results-oriented Principal Data Architect with 12+ years of experience in designing, developing, and deploying scalable and robust AI/ML solutions. Proven ability to lead cross-functional teams, manage complex projects, and deliver impactful business outcomes. Expertise in utilizing cutting-edge technologies, including Go, Python, R, TensorFlow, Keras, and AWS to build and optimize data pipelines, machine learning models, and cloud-based infrastructure. Passionate about leveraging the power of AI/ML to solve challenging real-world problems and drive innovation.

Education

Imperial College London, London, UK

MSc in Data Science & Artificial Intelligence, 2011

BSc in Computer Science, 2009

Technical Skills

Programming Languages: Go, Python (Pandas, NumPy, Scikit-learn), R (dplyr, ggplot2), SQL

Machine Learning Frameworks: TensorFlow, Keras, PyTorch

Cloud Platforms: AWS (EC2, S3, Lambda, RDS, Redshift)

Databases: PostgreSQL, MySQL, MongoDB

Big Data Technologies: Spark, Hadoop

Data Visualization: Tableau, Matplotlib, Seaborn

Version Control: Git

Professional Experience

Veridian Dynamics, New York, NY

Principal Data Architect | June 2020 – Present * Led the design and

implementation of a real-time fraud detection system using TensorFlow and

Keras, resulting in a 25% reduction in fraudulent transactions. * Architected and

deployed a scalable data pipeline using AWS services (S3, EMR, Redshift) to

process and analyze large volumes of streaming data. * Mentored and guided

junior data scientists and engineers in best practices for data engineering, model development, and deployment. * Developed and implemented a comprehensive data governance framework to ensure data quality and compliance. * Successfully delivered multiple AI/ML projects on time and within budget, consistently exceeding expectations.

Innovatech Solutions, San Francisco, CA

Senior Data Scientist | January 2016 – June 2020 * Developed and deployed predictive models for customer churn using various machine learning algorithms, resulting in a 15% improvement in customer retention. * Designed and implemented A/B testing frameworks to evaluate the effectiveness of different marketing campaigns. * Conducted extensive data analysis and visualization to identify key business insights and inform strategic decision-making. * Collaborated with cross-functional teams (marketing, sales, product) to translate business requirements into technical solutions.

DataWise Analytics, London, UK

Data Scientist | July 2011 – December 2015 * Built and deployed various machine learning models for various clients across diverse industries (finance, healthcare, retail). * Performed data cleaning, preprocessing, and feature engineering to improve model accuracy and performance. * Developed and presented insightful data visualizations and reports to clients.

AI/ML Projects

Real-time Fraud Detection System (Veridian Dynamics): Developed a real-time fraud detection system using TensorFlow and Keras, deployed on AWS, resulting in a 25% reduction in fraudulent transactions. Utilized anomaly detection techniques and LSTM networks for time series analysis.

Customer Churn Prediction Model (Innovatech Solutions): Developed a predictive model for customer churn using various machine learning algorithms (logistic regression, random forest, gradient boosting), resulting in a 15% improvement in customer retention. Implemented A/B testing to validate model performance.

Image Recognition System for Medical Diagnosis (Personal Project): Developed an image recognition system for detecting various medical conditions using convolutional neural networks (CNNs) and transfer learning techniques. Achieved 95% accuracy on a test dataset. Utilized TensorFlow and Keras for model development and deployment.
