Professional Summary

Highly accomplished and results-oriented Lead Machine Learning Scientist with 8+ years of experience at Veridian Dynamics, specializing in developing and deploying cutting-edge AI/ML solutions. Proven ability to lead and mentor teams, translate complex business problems into actionable machine learning models, and deliver impactful results across diverse industries. Expertise in natural language processing (NLP), computer vision, and time series analysis, with a strong foundation in statistical modeling and deep learning. Proficient in Python, Go, Java, and cloud platforms such as Google Cloud Platform (GCP). Passionate about leveraging AI to solve challenging problems and drive innovation.

Education

Stanford University, Stanford, CA |

Master of Science in Computer Science, Artificial Intelligence Focus (2015) | GPA: 3.9/4.0 * Thesis: "Novel Applications of Deep Learning in Natural Language Understanding for Enhanced Cybersecurity" * Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Reinforcement Learning, Distributed Systems, Database Management

University of California, Berkeley, Berkeley, CA |

Bachelor of Science in Computer Science (2013) | GPA: 3.7/4.0 * Dean's List: All Semesters

Technical Skills

Programming Languages: Python (Expert), Go (Proficient), Java (Proficient), C++ (Intermediate) **Machine Learning Libraries & Frameworks:** Scikit-learn, TensorFlow, PyTorch, Keras, Hugging Face Transformers, XGBoost, LightGBM **Cloud Platforms:** Google Cloud Platform (GCP) (Expert), Amazon Web Services (AWS) (Intermediate), Microsoft Azure (Basic) **Databases:** SQL, NoSQL (MongoDB,

Cassandra) **Big Data Technologies:** Apache Spark, Hadoop **Version Control:** Git
Other: Docker, Kubernetes, Agile methodologies

Professional Experience

Veridian Dynamics, Sunnyvale, CA |

Lead Machine Learning Scientist | 2017 – Present * Led a team of 5 ML engineers in the development and deployment of a novel NLP model for automated threat detection, resulting in a 25% reduction in security breaches. * Designed and implemented a real-time anomaly detection system using time series analysis and deep learning techniques, improving operational efficiency by 15%. * Developed and deployed a computer vision model for automated image classification, achieving 95% accuracy in identifying defective products. * Mentored junior engineers and provided technical guidance on best practices in ML model development and deployment. * Successfully secured funding for multiple AI/ML research projects.

Innovatech Solutions, Mountain View, CA |

Machine Learning Engineer | 2015 – 2017 * Developed and deployed machine learning models for various clients in the finance and healthcare industries. * Implemented machine learning algorithms for fraud detection, customer churn prediction, and medical image analysis. * Collaborated with cross-functional teams to define project requirements and deliver high-quality solutions.

AI/ML Projects

Automated Threat Detection System (Veridian Dynamics): Developed a state-of-the-art NLP model using Hugging Face Transformers and BERT to detect sophisticated cyber threats in real-time. The system significantly improved the speed and accuracy of threat identification, reducing response times and minimizing potential damage. Deployed on GCP using Kubernetes for scalability and reliability.

Real-time Anomaly Detection System (Veridian Dynamics): Designed and implemented a real-time anomaly detection system for critical infrastructure monitoring. The system leveraged LSTM networks and time series analysis techniques to identify unusual patterns and predict potential failures. Improved operational efficiency and reduced downtime.

Medical Image Classification Model (Veridian Dynamics): Developed a deep learning model for automated classification of medical images, achieving high accuracy in identifying various diseases. The model was trained on a large dataset of medical images and validated using rigorous testing procedures. Contributed to improved diagnostic accuracy and reduced workload for medical professionals.

Customer Churn Prediction Model (Innovatech Solutions): Built a machine learning model to predict customer churn for a major telecommunications company. The model used a combination of logistic regression and gradient boosting techniques to identify customers at high risk of churning. The model improved customer retention rates and reduced churn costs.
