Professional Summary

Highly accomplished and results-oriented Principal Data Architect with 12+ years of experience leading and executing complex data initiatives within large-scale organizations. Proven ability to design, develop, and implement innovative AI/ML solutions that drive significant business value. Expertise in leveraging cloud-based technologies (GCP) and programming languages (R, C++, Java, PyTorch, TensorFlow) to build robust and scalable data architectures. Passionate about leveraging cutting-edge technologies to solve challenging problems and deliver impactful results. Currently leading the development of a next-generation AI-powered predictive maintenance system at Veridian Dynamics.

Education

- **Carnegie Mellon University**, Pittsburgh, PA
 - Master of Science in Artificial Intelligence, 2011
 - Bachelor of Science in Computer Science, 2009

Technical Skills

- **Programming Languages:** R, C++, Java, Python (including NumPy, Pandas, Scikit-learn), MATLAB
- **Deep Learning Frameworks:** PyTorch, TensorFlow, Keras
- **Cloud Platforms:** Google Cloud Platform (GCP) – Compute Engine, Cloud Storage, BigQuery, Dataflow, Dataproc, AI Platform
- **Databases:** SQL, NoSQL (MongoDB, Cassandra), PostgreSQL
- **Big Data Technologies:** Hadoop, Spark, Hive
- **Data Visualization:** Tableau, Power BI, Matplotlib, Seaborn
- **Version Control:** Git

Professional Experience

- **Veridian Dynamics**, Pittsburgh, PA
 - **Principal Data Architect** | June 2018 – Present
 - Led the design and implementation of a next-generation AI-powered predictive maintenance system, resulting in a 25%

reduction in downtime and a 15% increase in operational efficiency.

- Developed and implemented a new data governance framework, improving data quality and accessibility across the organization.
- Mentored and guided a team of 5 junior data engineers and data scientists.
- Successfully migrated the company's data warehouse to GCP, resulting in a 30% reduction in infrastructure costs.
- Implemented a real-time data streaming pipeline using Apache Kafka and Apache Flink.

- **Innovatech Solutions**, Boston, MA

- **Senior Data Scientist** | January 2015 – June 2018

- Developed and deployed several machine learning models for fraud detection, resulting in a 10% reduction in fraudulent transactions.
 - Built and maintained several data pipelines using Apache Spark and Hadoop.
 - Conducted A/B testing and analysis to optimize marketing campaigns.
 - Presented findings and recommendations to senior management.

- **TechCorp**, San Francisco, CA

- **Data Scientist** | July 2011 – December 2014

- Developed and implemented machine learning algorithms for recommendation systems.
 - Performed data analysis and visualization to identify trends and insights.
 - Contributed to the development of new data products.

AI/ML Projects

- **Predictive Maintenance System (Veridian Dynamics):** Developed a deep learning model using PyTorch and time-series data to predict equipment failures with high accuracy. Deployed the model on GCP using Kubernetes.
- **Fraud Detection System (Innovatech Solutions):** Built a machine learning model using XGBoost to detect fraudulent transactions with high precision and recall. Integrated the model into the company's existing fraud detection system.
- **Recommendation System (TechCorp):** Developed a collaborative filtering algorithm using Python and Spark to provide personalized recommendations to users. Improved the click-through rate by 15%.

- **Image Classification System (Personal Project):** Built a convolutional neural network using TensorFlow to classify images with high accuracy. Achieved state-of-the-art results on a publicly available dataset.
