Professional Summary

Highly analytical and results-oriented Computer Vision Specialist with 5+ years of experience at Aetherium Analytics, specializing in the development and deployment of cutting-edge AI/ML solutions. Proven ability to design, implement, and optimize complex algorithms for image recognition, object detection, and image segmentation. Expertise in deep learning frameworks (Keras, PyTorch), programming languages (Java, C++, R), and cloud computing platforms (AWS). Passionate about leveraging AI to solve challenging real-world problems and committed to continuous learning and innovation within the field.

Education

University of Oxford, Oxford, UK | Master of Science (MSc), Computer Science, 2018 | * GPA: 3.9/4.0 | * Thesis: "Real-time Object Tracking using Deep Convolutional Neural Networks" |

University of Oxford, Oxford, UK | Bachelor of Science (BSc), Mathematics, 2016 | * GPA: 3.8/4.0 | * Dean's List all semesters |

Technical Skills

Programming Languages: Java, C++, Python (NumPy, Pandas, Scikit-learn), R, MATLAB

Deep Learning Frameworks: TensorFlow/Keras, PyTorch, Caffe

Cloud Computing: AWS (EC2, S3, Lambda, RDS), Google Cloud Platform (GCP) - Basic familiarity

Databases: SQL, NoSQL (MongoDB)

Computer Vision Libraries: OpenCV, scikit-image

Other: Git, Docker, Kubernetes (basic familiarity), Agile methodologies

Professional Experience

Aetherium Analytics, London, UK | Computer Vision Specialist | August 2018
– Present

- Developed and deployed a real-time object detection system for autonomous vehicles using YOLOv5, resulting in a 15% improvement in accuracy compared to the previous system.
- Led the design and implementation of a deep learning model for medical image analysis, achieving 95% accuracy in identifying cancerous cells.
- Designed and implemented a robust pipeline for processing and analyzing large-scale image datasets using AWS cloud services.
- Mentored junior engineers in best practices for AI/ML development and deployment.
- Contributed to the development of a novel algorithm for image segmentation using graph convolutional networks.
- Presented research findings at international conferences and workshops.

AI/ML Projects

Real-time Object Tracking System for Autonomous Vehicles (Aetherium Analytics) | * Utilized YOLOv5 for object detection and Kalman filtering for tracking. * Achieved 92% mean Average Precision (mAP) and real-time performance on embedded hardware. * Deployed the system on a fleet of autonomous vehicles for testing and validation.

Medical Image Analysis for Cancer Detection (Aetherium Analytics) | * Developed a convolutional neural network (CNN) for classifying cancerous cells in microscopic images. * Achieved 95% accuracy on a large, diverse dataset of medical images. * Collaborated with medical professionals to validate the accuracy and reliability of the model.

Image Segmentation using Graph Convolutional Networks (Personal Project) | * Implemented a graph convolutional network (GCN) for semantic image segmentation. * Achieved state-of-the-art results on several benchmark datasets. * Published the code and results on GitHub.

Sentiment Analysis of Social Media Data (University Project) | * Developed a natural language processing (NLP) model for analyzing sentiment in social media text. * Achieved high accuracy in classifying positive, negative, and neutral sentiment. * Used the model to track public opinion on various topics.
