Professional Summary

Highly accomplished and results-oriented Principal Data Architect with 12+ years of experience in designing, developing, and deploying robust and scalable AI/ML solutions within large-scale enterprise environments. Proven ability to lead and mentor cross-functional teams, translating complex business requirements into innovative and effective data strategies. Expertise in leveraging cloud-based platforms (GCP) and advanced machine learning techniques (PyTorch, Hugging Face Transformers) to deliver impactful business outcomes. Passionate about pushing the boundaries of AI and its application to solve real-world problems.

Education

University of Oxford, Oxford, UK | Master of Science (MSc), Computer Science, 2011 | * GPA: 3.9/4.0 | * Thesis: "Novel Approaches to Deep Reinforcement Learning for Resource Allocation in Cloud Computing" |

University of Oxford, Oxford, UK | Bachelor of Science (BSc), Mathematics, 2009 | * GPA: 3.8/4.0 |

Technical Skills

Programming Languages: C++, Java, Python (expert), R (proficient) | **Machine Learning Frameworks:** PyTorch (expert), TensorFlow (proficient), Scikit-learn (proficient), Hugging Face Transformers (expert) | **Cloud Platforms:** Google Cloud Platform (GCP) (expert), Amazon Web Services (AWS) (proficient), Microsoft Azure (basic) | **Databases:** SQL, NoSQL (MongoDB, Cassandra), BigQuery | **Big Data Technologies:** Apache Spark, Hadoop, Apache Kafka | **Data Visualization:** Tableau, Power BI, Matplotlib, Seaborn | **Other:** Docker, Kubernetes, Git, Agile methodologies

Professional Experience

Synthetica Global, San Francisco, CA | Principal Data Architect | 2018 - Present
| * Led the design and implementation of a novel AI-powered fraud detection

system, resulting in a 25% reduction in fraudulent transactions. | * Developed and deployed a real-time recommendation engine using PyTorch and Hugging Face Transformers, increasing customer engagement by 15%. | * Mentored and guided a team of 10 data scientists and engineers in the development and deployment of various AI/ML projects. | * Successfully migrated the company's data infrastructure to Google Cloud Platform (GCP), improving scalability and reducing infrastructure costs by 20%. | * Spearheaded the adoption of Agile methodologies within the data science team, improving project delivery speed and efficiency. |

DataWise Solutions, New York, NY | Senior Data Scientist | 2015 - 2018 | * Developed and deployed several machine learning models for various clients across different industries, including finance, healthcare, and retail. | * Utilized advanced statistical techniques to analyze large datasets and extract actionable insights. | * Collaborated with cross-functional teams to understand business requirements and translate them into technical solutions. | * Presented findings and recommendations to clients through clear and concise presentations. |

QuantTech Analytics, London, UK | Data Scientist | 2011 - 2015 | * Developed and implemented algorithms for high-frequency trading using C++ and Java. | * Performed quantitative analysis of financial markets and developed predictive models. | * Contributed to the development of a new risk management system. |

AI/ML Projects

Fraud Detection System (Synthetica Global): Developed a real-time fraud detection system using PyTorch and a custom transformer model, achieving 95% accuracy in identifying fraudulent transactions. Utilized GCP for scalable deployment and monitoring.

Recommendation Engine (Synthetica Global): Designed and implemented a personalized recommendation engine based on user behavior data, resulting in a 15% increase in customer engagement. Leveraged Hugging Face Transformers for efficient model training and deployment.

Customer Churn Prediction (DataWise Solutions): Built a predictive model for customer churn using various machine learning techniques, including gradient boosting and neural networks. Improved customer retention by 10%.

Sentiment Analysis of Social Media Data (DataWise Solutions): Developed a sentiment analysis model to analyze social media data and identify potential brand risks. This project used a variety of NLP techniques and resulted in improved brand management strategies for clients.
