Professional Summary

Highly motivated and results-oriented Computer Vision Specialist with 5+ years of experience at Innovate AI Labs, specializing in the development and implementation of cutting-edge AI/ML solutions. Proven ability to design, develop, and deploy robust and scalable computer vision systems using deep learning frameworks like PyTorch and Keras. Expertise in Java, C++, and Go, coupled with cloud platform experience on Microsoft Azure. Seeking a challenging role where I can leverage my skills and experience to contribute to the advancement of AI technology and drive innovation.

Education

Imperial College London, London, UK |

----- | ----- Master of Science (MSc), Computer Science, 2018 | GPA: 3.9/4.0

Relevant Coursework: Machine Learning, Deep Learning, Computer Vision, Natural Language Processing, Algorithm Design and Analysis, Distributed Systems

Technical Skills

Programming Languages: Java, C++, Go, Python

Deep Learning Frameworks: PyTorch, Keras, TensorFlow (familiar)

Cloud Platforms: Microsoft Azure (Azure Machine Learning, Azure Cognitive Services), AWS (basic familiarity)

Databases: SQL, NoSQL (MongoDB)

Tools & Technologies: Git, Docker, Kubernetes, OpenCV, Scikit-learn, Pandas, NumPy

Operating Systems: Windows, Linux (Ubuntu, CentOS)

Professional Experience

Innovate AI Labs, London, UK |

----- | ----- **Computer Vision Specialist** | June 2018 – Present

* Led the development and deployment of a real-time object detection system for autonomous vehicles, resulting in a 15% improvement in accuracy compared to the previous system. Utilized PyTorch and deployed on Azure. * Designed and implemented a novel deep learning model for image segmentation, achieving state-of-the-art results on a challenging medical image dataset. Published findings in a peer-reviewed conference. * Developed and maintained several key components of the company's flagship AI platform, ensuring high availability and scalability. Utilized Java and Go for backend services. * Mentored junior engineers in best practices for software development and AI/ML model deployment. * Collaborated with cross-functional teams (product, engineering, research) to define project requirements and deliver solutions that meet business needs.

AI/ML Projects

Real-time Object Detection for Autonomous Vehicles (Innovate AI Labs) |

----- | ----- * **Technology:** PyTorch, OpenCV, YOLOv5, Azure Kubernetes Service *

Description: Developed a real-time object detection system for autonomous vehicles using YOLOv5, achieving high accuracy and low latency. Deployed the system on Azure Kubernetes Service for scalability and reliability. Improved accuracy by 15% compared to previous system.

Medical Image Segmentation using Deep Learning (Innovate AI Labs) |

----- | ----- * **Technology:** PyTorch, U-Net architecture, TensorBoard *

Description: Designed and implemented a novel U-Net based deep learning model for medical image segmentation, achieving state-of-the-art results on a challenging dataset. Results published in "Advances in Medical Image Analysis" conference.

Sentiment Analysis of Social Media Data (Personal Project) |

----- | ----- * **Technology:** Python, NLTK, Scikit-learn * **Description:** Developed a sentiment analysis model using natural language processing techniques to analyze social media data and predict sentiment (positive, negative, neutral). Used a variety of techniques including TF-IDF and word embeddings.

Handwritten Digit Recognition using MNIST Dataset (Personal Project) |

----- | ----- * **Technology:** Keras, TensorFlow, CNNs * **Description:** Implemented a Convolutional Neural Network (CNN) to classify handwritten digits from the MNIST dataset, achieving over 99% accuracy. Explored different CNN architectures and hyperparameter tuning techniques.
