Professional Summary

Highly motivated and results-oriented Computer Vision Specialist with 5+ years of experience at Aetherium Analytics, specializing in the development and implementation of cutting-edge AI/ML solutions. Proven ability to leverage advanced techniques in computer vision, deep learning, and cloud computing to solve complex business problems. Expertise in image processing, object detection, and image classification, coupled with strong programming skills in R, C++, Java, Python (Scikit-learn, PyTorch), and experience with Microsoft Azure cloud services. Seeking a challenging role where I can contribute my expertise to drive innovation and achieve significant impact.

Education

- **Carnegie Mellon University**, Pittsburgh, PA – Master of Science in Robotics, May 2018
 - GPA: 3.9/4.0
 - Thesis: "Real-time Object Tracking using Deep Reinforcement Learning"
- **Carnegie Mellon University**, Pittsburgh, PA – Bachelor of Science in Computer Science, May 2016
 - GPA: 3.8/4.0
 - Minor: Mathematics

Technical Skills

- **Programming Languages:** R, C++, Java, Python (NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow)
- **Machine Learning Libraries:** Scikit-learn, PyTorch, TensorFlow, Keras
- **Deep Learning Frameworks:** PyTorch, TensorFlow
- **Cloud Platforms:** Microsoft Azure (Azure Machine Learning, Azure Cognitive Services), AWS (Amazon S3, EC2)
- **Databases:** SQL, NoSQL (MongoDB)
- **Computer Vision:** Image processing, object detection (YOLO, Faster R-CNN), image classification (ResNet, Inception), image segmentation (U-Net), video analysis
- **Operating Systems:** Windows, Linux (Ubuntu, CentOS)
- **Tools:** Git, Docker, Kubernetes

Professional Experience

- **Computer Vision Specialist | Aetherium Analytics | Pittsburgh, PA | June 2018 – Present**

- Developed and deployed a real-time object detection system for autonomous vehicles using YOLOv5, resulting in a 15% improvement in accuracy compared to the previous system.
- Designed and implemented a deep learning model for image classification to improve the accuracy of product identification in an e-commerce platform, leading to a 10% reduction in misclassification errors.
- Led the development of a computer vision-based system for defect detection in manufacturing, reducing production costs by 8%.
- Mentored junior engineers in best practices for AI/ML model development and deployment.
- Contributed to the development of a scalable cloud-based infrastructure for AI/ML model training and deployment using Microsoft Azure.

- **Software Engineering Intern | NovaTech Solutions | Pittsburgh, PA | June 2017 – August 2017**

- Developed and implemented a Java-based application for data analysis and visualization.
- Contributed to the development of a large-scale data processing pipeline using Apache Spark.

AI/ML Projects

- **Real-time Object Tracking using Deep Reinforcement Learning (Master's Thesis):** Developed a novel approach to real-time object tracking using deep reinforcement learning, achieving state-of-the-art results on challenging datasets. (Code available on GitHub: github.com/aurorathornton/object-tracking-reinforcement-learning)
- **Facial Recognition System using Convolutional Neural Networks:** Developed a high-accuracy facial recognition system using convolutional neural networks, achieving 98% accuracy on the LFW dataset. (Code available on GitHub: github.com/aurorathornton/facial-recognition-cnn)
- **Image Segmentation for Medical Image Analysis:** Developed a U-Net based model for image segmentation in medical images, achieving high accuracy in segmenting various anatomical structures. (Code available on GitHub: github.com/aurorathornton/medical-image-segmentation)
