Professional Summary

Highly accomplished and results-oriented Senior AI Engineer with 8+ years of experience at Veridian Dynamics, specializing in the design, development, and deployment of cutting-edge machine learning solutions. Proven ability to leverage advanced algorithms and technologies like Hugging Face Transformers and Microsoft Azure to solve complex business problems and drive significant improvements in efficiency and performance. Expertise in Java, C++, and R programming languages, coupled with a strong theoretical foundation in AI/ML gained from an MIT education. Passionate about pushing the boundaries of AI and contributing to innovative projects with measurable impact.

Education

Massachusetts Institute of Technology (MIT), Cambridge, MA

Master of Science in Artificial Intelligence, 2015

Bachelor of Science in Computer Science, 2013

GPA: 3.9/4.0

Technical Skills

Programming Languages: Java, C++, Python (R, NumPy, Pandas), R, SQL

Machine Learning Libraries & Frameworks: Scikit-learn, TensorFlow, PyTorch, Keras, Hugging Face Transformers, XGBoost, LightGBM

Cloud Platforms: Microsoft Azure (Azure Machine Learning, Azure Databricks, Azure Cognitive Services), AWS (Amazon SageMaker), Google Cloud Platform (GCP)

Databases: SQL Server, PostgreSQL, MySQL, MongoDB

Big Data Technologies: Spark, Hadoop, Hive

Other Tools & Technologies: Docker, Kubernetes, Git, Jira, Agile methodologies

Professional Experience

Senior AI Engineer, Veridian Dynamics | Boston, MA | June 2017 – Present * Led the development and deployment of a real-time fraud detection system using deep learning models, resulting in a 25% reduction in fraudulent transactions. * Designed and implemented a recommendation engine using collaborative filtering and content-based filtering techniques, increasing customer engagement by 15%. * Developed and maintained several machine learning pipelines using Azure Machine Learning, improving model training efficiency by 40%. * Mentored junior engineers in best practices for AI/ML development and deployment. * Successfully secured a \$5 million grant for research and development of novel AI algorithms. * Presented research findings at several international conferences.

AI Engineer, Innovatech Solutions | Cambridge, MA | June 2015 – June 2017 * Developed and deployed machine learning models for various clients across different industries, including finance, healthcare, and retail. * Designed and implemented data pipelines for processing large datasets using Spark and Hadoop. * Contributed to the development of a new product using natural language processing (NLP) techniques.

AI/ML Projects

Real-time Fraud Detection System (Veridian Dynamics): Developed a deep learning model using LSTM networks and trained on a large dataset of transactional data to detect fraudulent activities in real-time. Achieved 95% accuracy in detecting fraudulent transactions. Deployed on Microsoft Azure.

Customer Recommendation Engine (Veridian Dynamics): Built a hybrid recommendation system using collaborative filtering and content-based filtering techniques to provide personalized recommendations to customers. Improved click-through rates by 15%. Deployed on a microservices architecture.

Sentiment Analysis of Social Media Data (Innovatech Solutions): Developed a sentiment analysis model using Recurrent Neural Networks (RNNs) to analyze social media data and identify customer opinions about a particular product. Achieved 88% accuracy in sentiment classification.

Image Classification using Convolutional Neural Networks (MIT): As part of a graduate research project, developed a convolutional neural network (CNN) for image classification, achieving state-of-the-art results on the CIFAR-10 dataset. Published findings in a peer-reviewed journal.
