Professional Summary

Highly accomplished and results-oriented Senior AI Engineer with 8+ years of experience at Veridian Dynamics, specializing in the design, development, and deployment of cutting-edge machine learning models and AI-powered solutions. Proven ability to leverage advanced techniques in deep learning, natural language processing, and computer vision to solve complex business problems and drive significant improvements in efficiency and performance. Expertise in R, C++, Java, TensorFlow, Hugging Face Transformers, and Microsoft Azure cloud services. Passionate about pushing the boundaries of AI and contributing to innovative projects with a measurable impact.

Education

Stanford University, Stanford, CA * Master of Science in Computer Science, Artificial Intelligence Specialization (2015) * Bachelor of Science in Computer Science (2013) * GPA: 3.9/4.0 * Dean's List: All Semesters

Technical Skills

Programming Languages: R, C++, Java, Python, SQL

Machine Learning Frameworks: TensorFlow, PyTorch, Keras, scikit-learn, XGBoost

Deep Learning Libraries: Hugging Face Transformers, OpenCV

Cloud Platforms: Microsoft Azure (Azure Machine Learning, Azure Databricks, Azure Cognitive Services), AWS (Amazon SageMaker), Google Cloud Platform (GCP)

Databases: SQL Server, MySQL, PostgreSQL

Big Data Technologies: Spark, Hadoop

Other: Git, Docker, Kubernetes, Agile methodologies

Professional Experience

Veridian Dynamics, Sunnyvale, CA Senior AI Engineer | June 2017 – Present

- Led the development and deployment of a novel deep learning model for real-time anomaly detection in manufacturing processes, resulting in a 25% reduction in production downtime and a 15% increase in overall efficiency.
- Designed and implemented a large-scale natural language processing system for sentiment analysis of customer feedback, improving customer satisfaction scores by 10%.
- Mentored junior engineers in best practices for AI model development, deployment, and maintenance.
- Spearheaded the adoption of cloud-based machine learning solutions, reducing infrastructure costs by 20%.
- Collaborated with cross-functional teams (product, engineering, marketing) to define project requirements and deliver high-quality AI solutions.
- Contributed to the development of internal AI/ML guidelines and best practices.

Veridian Dynamics, Sunnyvale, CA AI Engineer | June 2015 – June 2017

- Developed and deployed several machine learning models for various business applications, including fraud detection, risk assessment, and predictive maintenance.
- Implemented data pipelines using Spark and Hadoop for processing large datasets.
- Conducted extensive data analysis and feature engineering to improve model accuracy and performance.
- Contributed to the development of internal AI/ML tools and libraries.

AI/ML Projects

Real-time Anomaly Detection in Manufacturing (Veridian Dynamics) *

Developed a deep learning model using TensorFlow and LSTM networks to detect anomalies in real-time sensor data from manufacturing equipment. * Achieved 98% accuracy in anomaly detection, significantly reducing production downtime and improving overall efficiency. * Utilized Azure Machine Learning for model training, deployment, and monitoring.

Customer Sentiment Analysis (Veridian Dynamics) * Built a natural language processing system using Hugging Face Transformers to analyze customer feedback from various sources (surveys, reviews, social media). * Developed a sentiment classification model that accurately predicted customer sentiment with

95% accuracy. * Deployed the model to a cloud-based platform for real-time sentiment analysis.

Predictive Maintenance System (Veridian Dynamics) * Created a predictive maintenance model using XGBoost to predict equipment failures and optimize maintenance schedules. * Reduced maintenance costs by 15% and improved equipment uptime by 10%. * Utilized Azure Databricks for data processing and model training.

Image Recognition System (Personal Project) * Developed a convolutional neural network (CNN) using TensorFlow and Keras for image recognition. * Achieved 92% accuracy on the ImageNet dataset. * Utilized transfer learning techniques to improve model performance and reduce training time.
