Professional Summary

Highly accomplished and results-oriented Senior AI Engineer with 8+ years of experience in designing, developing, and deploying cutting-edge machine learning solutions across diverse industries. Proven ability to translate complex business problems into effective AI-driven strategies, leading to significant improvements in efficiency, accuracy, and profitability. Expertise in developing and implementing machine learning models using various algorithms and programming languages, including deep learning frameworks like PyTorch and traditional machine learning libraries like Scikit-learn. Experienced in cloud computing environments, particularly AWS. Seeking a challenging and impactful role where I can leverage my expertise to drive innovation and achieve ambitious goals.

Education

- **Imperial College London, London, UK** – Master of Science (MSc), Computer Science, 2015
 - Specialization: Artificial Intelligence and Machine Learning
 - GPA: 3.9/4.0
- **Imperial College London, London, UK** – Bachelor of Science (BSc), Mathematics, 2013
 - GPA: 3.7/4.0

Technical Skills

- **Programming Languages:** R, C++, Java, Python (NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow)
- **Machine Learning:** Regression (Linear, Logistic, Polynomial), Classification (SVM, Decision Trees, Random Forest, Naive Bayes), Clustering (K-means, DBSCAN), Deep Learning (CNNs, RNNs, LSTMs), Reinforcement Learning (Q-learning, SARSA)
- **Big Data Technologies:** Hadoop, Spark
- **Cloud Computing:** AWS (EC2, S3, Lambda, RDS, SageMaker)
- **Databases:** SQL, NoSQL (MongoDB)
- **Data Visualization:** Matplotlib, Seaborn, Tableau
- **Version Control:** Git

Professional Experience

• Senior AI Engineer | Aetherium Analytics | London, UK | 2019 – Present

- Led the development and deployment of a real-time fraud detection system using deep learning, resulting in a 25% reduction in fraudulent transactions.
- Designed and implemented a predictive maintenance model for industrial machinery using time series analysis, leading to a 15% decrease in downtime.
- Mentored junior engineers in best practices for AI/ML development and deployment.
- Successfully secured and managed a £500,000 research grant for developing novel AI solutions for climate change prediction.
- Developed and maintained robust data pipelines using AWS services, ensuring data quality and efficient processing.

• AI Engineer | NovaTech Solutions | London, UK | 2017 – 2019

- Developed and deployed machine learning models for customer churn prediction, improving customer retention rates by 10%.
- Built and maintained data visualization dashboards to track model performance and identify areas for improvement.
- Collaborated with cross-functional teams to integrate AI solutions into existing business processes.
- Contributed to the development of a new AI platform for internal use, improving the efficiency of data analysis tasks.

• Data Scientist Intern | Quantify Data | London, UK | Summer 2016

- Conducted exploratory data analysis on large datasets using R and Python.
- Developed statistical models to predict customer behavior.
- Presented findings and recommendations to senior management.

AI/ML Projects

- **Real-time Fraud Detection System (Aetherium Analytics):** Developed a deep learning model using LSTM networks to detect fraudulent transactions in real-time with 95% accuracy. Utilized AWS SageMaker for model training and deployment. [GitHub link: github.com/eliassterling/fraud-detection]
- **Predictive Maintenance Model (Aetherium Analytics):** Built a time series forecasting model using ARIMA and Prophet to predict equipment failures, reducing downtime by 15%. Deployed the model on AWS Lambda for automated alerts. [GitHub link: github.com/eliassterling/predictive-maintenance]

- **Customer Churn Prediction Model (NovaTech Solutions):** Developed a gradient boosting machine (GBM) model to predict customer churn with 80% accuracy. Improved model interpretability using SHAP values. [GitHub link: github.com/eliassterling/customer-churn]
- **Image Classification using CNNs (Personal Project):** Built a convolutional neural network (CNN) to classify images of handwritten digits using the MNIST dataset, achieving 99% accuracy. Experimentation with different architectures and hyperparameter tuning. [GitHub link: github.com/eliassterling/mnist-cnn]
