Professional Summary

Highly accomplished and results-oriented Senior AI Engineer with 8+ years of experience at Quantum Horizon Corp., specializing in the design, development, and deployment of cutting-edge machine learning models and AI-driven solutions. Proven ability to leverage advanced techniques in deep learning, natural language processing (NLP), and computer vision to solve complex business problems and deliver significant value. Expertise in R, Java, Go, TensorFlow, Hugging Face Transformers, and Google Cloud Platform (GCP). Passionate about pushing the boundaries of AI and contributing to innovative projects with a focus on scalability and efficiency.

Education

Carnegie Mellon University, Pittsburgh, PA | Master of Science in Artificial Intelligence, 2015 | Bachelor of Science in Computer Science, 2013 | GPA: 3.9/4.0 | Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Reinforcement Learning, Data Mining, Distributed Systems, Algorithm Design and Analysis

Technical Skills

Programming Languages: R, Java, Go, Python (Pandas, NumPy, Scikit-learn) **Deep Learning Frameworks:** TensorFlow, PyTorch, Keras **NLP Libraries:** Hugging Face Transformers, spaCy, NLTK **Cloud Platforms:** Google Cloud Platform (GCP) (Compute Engine, Cloud Storage, BigQuery, Dataflow), AWS (S3, EC2) **Databases:** SQL, NoSQL (MongoDB, Cassandra) **Big Data Technologies:** Spark, Hadoop **Version Control:** Git **Containerization:** Docker, Kubernetes

Professional Experience

Senior AI Engineer | Quantum Horizon Corp., Pittsburgh, PA | June 2017 – Present * Led the development and deployment of a novel deep learning model for fraud detection, resulting in a 25% reduction in fraudulent transactions and a \$5 million annual cost savings. * Designed and implemented a real-time

recommendation system using TensorFlow and collaborative filtering techniques, increasing user engagement by 15%. * Architected and managed a large-scale data pipeline using GCP services, processing terabytes of data daily for model training and inference. * Mentored junior engineers in best practices for AI/ML development and deployment. * Contributed to the development of internal AI/ML infrastructure and tools. * Successfully secured two patents related to AI-driven solutions developed at Quantum Horizon Corp.

AI Engineer | NovaTech Solutions, Pittsburgh, PA | June 2015 – June 2017 * Developed and deployed machine learning models for various clients across multiple industries, including finance, healthcare, and retail. * Implemented natural language processing models for sentiment analysis and text classification. * Built and maintained data pipelines using Spark and Hadoop. * Contributed to the development of a company-wide machine learning platform.

AI/ML Projects

Fraud Detection System (Quantum Horizon Corp.) | * Developed a deep learning model using TensorFlow and LSTM networks to detect fraudulent transactions in real-time. * Achieved 98% accuracy in detecting fraudulent transactions. * Reduced false positives by 10%.

Real-time Recommendation System (Quantum Horizon Corp.) | * Implemented a collaborative filtering-based recommendation system using TensorFlow. * Increased user engagement by 15%. * Improved the accuracy of recommendations by 5%.

Sentiment Analysis Model (NovaTech Solutions) | * Developed a sentiment analysis model using Hugging Face Transformers and BERT. * Achieved 95% accuracy in classifying sentiment. * Deployed the model as a RESTful API.

Image Classification Model (Personal Project) | * Developed an image classification model using PyTorch and ResNet. * Achieved 92% accuracy on the ImageNet dataset. * Utilized transfer learning to improve model performance.

Natural Language Generation System (Personal Project) | * Developed a natural language generation system using Hugging Face Transformers and GPT-2. * Generated coherent and fluent text. * Utilized fine-tuning to improve model performance on specific tasks.
