Professional Summary

Highly accomplished and results-oriented Senior AI Engineer with 8+ years of experience at Quantum Horizon Corp., specializing in the design, development, and deployment of cutting-edge AI/ML solutions. Proven ability to leverage advanced techniques in deep learning, natural language processing, and computer vision to solve complex business problems. Expertise in Python, Go, Java, PyTorch, Hugging Face Transformers, and AWS cloud services. Adept at collaborating with cross-functional teams to deliver high-impact projects from conception to production. Passionate about pushing the boundaries of AI and contributing to innovative technological advancements.

Education

Massachusetts Institute of Technology (MIT), Cambridge, MA | Master of Science in Artificial Intelligence, 2015 | Bachelor of Science in Computer Science, 2013 | GPA: 3.9/4.0 | Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Reinforcement Learning, Distributed Systems, Algorithm Design and Analysis

Technical Skills

Programming Languages: Python (Expert), Go (Proficient), Java (Proficient), C++ (Intermediate)

AI/ML Frameworks & Libraries: PyTorch (Expert), TensorFlow (Proficient), Keras (Proficient), Scikit-learn (Proficient), Hugging Face Transformers (Expert), OpenCV (Proficient)

Cloud Computing: AWS (Expert) – EC2, S3, Lambda, RDS, SageMaker, Google Cloud Platform (GCP) (Intermediate)

Databases: SQL (Proficient), NoSQL (Intermediate) – MongoDB, Cassandra

Tools & Technologies: Docker, Kubernetes, Git, Jira, Agile methodologies

Professional Experience

Senior AI Engineer, Quantum Horizon Corp., Boston, MA | 2018 – Present * Led the development and deployment of a novel deep learning model for real-time fraud detection, resulting in a 25% reduction in fraudulent transactions. * Designed and implemented a scalable NLP pipeline for sentiment analysis of customer reviews, improving customer service responsiveness by 15%. * Mentored junior engineers in best practices for AI/ML development and deployment. * Spearheaded the adoption of new technologies, including Hugging Face Transformers, significantly improving model performance and development speed. * Contributed to the development of a proprietary AI platform for automating various business processes.

AI Engineer, NovaTech Solutions, Cambridge, MA | 2015 – 2018 * Developed and deployed machine learning models for various clients across different industries, including finance, healthcare, and retail. * Collaborated with data scientists to design and implement data pipelines for processing large datasets. * Implemented robust monitoring and alerting systems for deployed models to ensure high availability and performance. * Contributed to the development of internal tools and libraries for streamlining the AI/ML development process.

AI/ML Projects

Real-time Fraud Detection System (Quantum Horizon Corp.) * Developed a deep learning model using PyTorch and LSTM networks to detect fraudulent transactions in real-time. * Achieved 95% accuracy in detecting fraudulent transactions, significantly reducing financial losses. * Deployed the model on AWS using SageMaker for scalability and reliability.

Sentiment Analysis Pipeline (Quantum Horizon Corp.) * Built a scalable NLP pipeline using Hugging Face Transformers and Python to analyze customer reviews and identify sentiment. * Improved customer service responsiveness by 15% through automated sentiment analysis. * Integrated the pipeline with existing CRM systems for seamless data flow.

Image Recognition System for Medical Diagnosis (NovaTech Solutions) * Developed a convolutional neural network (CNN) using TensorFlow to classify medical images for disease detection. * Achieved 90% accuracy in classifying various diseases, assisting medical professionals in diagnosis. * Deployed the model on a cloud-based platform for accessibility and scalability.

Predictive Maintenance Model for Industrial Equipment (NovaTech Solutions) * Developed a machine learning model using time series analysis to predict equipment failures and optimize maintenance schedules. * Reduced

equipment downtime by 10% through proactive maintenance. * Implemented the model using Python and Scikit-learn.
