Professional Summary

Highly accomplished and results-oriented Senior AI Engineer with 8+ years of experience in designing, developing, and deploying cutting-edge machine learning solutions at Aetherium Analytics. Proven ability to leverage advanced algorithms and techniques to solve complex business problems, resulting in significant improvements in efficiency and profitability. Expertise in a wide range of programming languages, deep learning frameworks, and cloud computing platforms. Passionate about pushing the boundaries of AI and contributing to innovative projects.

Education

- **University of Oxford**, Oxford, UK
 - M.Sc. in Artificial Intelligence, 2015
 - B.Sc. in Computer Science, 2013
 - GPA: 3.9/4.0

Technical Skills

- **Programming Languages:** C++, Go, Python (NumPy, Pandas, Scikit-learn), R, Java
- **Deep Learning Frameworks:** TensorFlow/Keras, PyTorch, MXNet
- **Cloud Computing:** AWS (EC2, S3, Lambda, SageMaker), GCP (Compute Engine, Cloud Storage), Azure (Virtual Machines, Blob Storage)
- **Databases:** SQL, NoSQL (MongoDB, Cassandra)
- **Big Data Technologies:** Hadoop, Spark
- **Version Control:** Git
- **Operating Systems:** Linux, Windows, macOS

Professional Experience

- **Senior AI Engineer, Aetherium Analytics** | San Francisco, CA | June 2020 – Present
 - Led the development and deployment of a real-time fraud detection system using deep learning, resulting in a 25% reduction in fraudulent transactions.
 - Designed and implemented a recommendation engine using collaborative filtering and content-based filtering, increasing customer engagement by 15%.
 - Mentored junior engineers and provided technical guidance on AI/ML projects.
 - Contributed to the development of a new internal AI platform for rapid prototyping and deployment of machine learning models.
- **AI Engineer, NovaTech Solutions** | Mountain View, CA | June 2017 – June 2020
 - Developed and deployed several machine learning models for various clients, including a natural language processing model for sentiment analysis and a computer vision model for object detection.
 - Implemented and optimized machine learning pipelines using various tools and technologies.
 - Collaborated with cross-functional teams to define project requirements and deliver high-quality solutions.
- **Software Engineer, TechCorp Inc.** | Palo Alto, CA | June 2015 – June 2017
 - Developed and maintained software applications using Java and other relevant technologies.
 - Contributed to the development of a large-scale data processing system.
 - Gained experience in agile software development methodologies.

AI/ML Projects

- **Real-time Fraud Detection System (Aetherium Analytics):** Developed a deep learning-based system for detecting fraudulent transactions in real-time. Utilized LSTM networks and anomaly detection techniques to achieve high accuracy and low latency. Deployed on AWS SageMaker.
- **Customer Recommendation Engine (Aetherium Analytics):** Designed and implemented a hybrid recommendation engine using collaborative filtering and content-based filtering techniques. Improved customer engagement by 15% through personalized recommendations. Utilized PyTorch for model development.

- **Sentiment Analysis System (NovaTech Solutions):** Developed a natural language processing (NLP) system for analyzing customer reviews and identifying sentiment (positive, negative, neutral). Achieved 90% accuracy using a combination of pre-trained models and fine-tuning techniques. Utilized TensorFlow/Keras.
- **Object Detection System (NovaTech Solutions):** Developed a computer vision system for detecting objects in images using convolutional neural networks (CNNs). Achieved 95% accuracy on a custom dataset. Utilized PyTorch and transfer learning.
