Professional Summary

Highly motivated and results-oriented Computer Vision Specialist with 5+ years of experience at Veridian Dynamics, specializing in the development and implementation of cutting-edge AI/ML solutions. Proven ability to leverage advanced techniques in deep learning, computer vision, and natural language processing to solve complex business problems. Expertise in Python, Java, R, TensorFlow, Hugging Face Transformers, and AWS cloud services. Seeking a challenging role where I can contribute my skills and experience to a dynamic and innovative team.

Education

Carnegie Mellon University, Pittsburgh, PA * **Master of Science in Robotics**, May 2018 * GPA: 3.9/4.0 * Thesis: "Real-time Object Detection and Tracking using Deep Learning for Autonomous Navigation" * **Bachelor of Science in Computer Science**, May 2016 * GPA: 3.7/4.0 * Minor: Mathematics

Technical Skills

Programming Languages: Python (Expert), Java (Proficient), R (Proficient), C++ (Intermediate)

Deep Learning Frameworks: TensorFlow (Expert), PyTorch (Proficient), Hugging Face Transformers (Expert)

Cloud Computing: AWS (Expert) - EC2, S3, Lambda, SageMaker

Computer Vision Libraries: OpenCV (Expert), scikit-image (Proficient)

Databases: SQL (Proficient), NoSQL (Intermediate)

Other Tools: Git, Docker, Kubernetes, Jira, Confluence

Professional Experience

Veridian Dynamics, Pittsburgh, PA Computer Vision Specialist | June 2018 – Present

- Developed and deployed a real-time object detection system for automated quality control in manufacturing, resulting in a 15% reduction in defect rates and a 10% increase in production efficiency.
- Led the design and implementation of a novel deep learning model for image segmentation, improving accuracy by 20% compared to existing methods.
- Created and maintained a robust pipeline for data preprocessing, model training, and deployment using AWS cloud services.
- Mentored junior engineers in best practices for AI/ML development and deployment.
- Contributed to the development of a new product line based on computer vision technology, securing a patent for a key algorithmic innovation.
- Presented research findings at several industry conferences and published a peer-reviewed paper on the application of deep learning to industrial automation.

Innovatech Solutions, Pittsburgh, PA Software Engineer Intern | June 2017 – August 2017

- Developed and implemented several features for a large-scale data analytics platform using Java and Spring Boot.
- Contributed to the design and implementation of a new data visualization module, improving user experience and data accessibility.
- Gained experience working in an agile development environment and collaborating with a team of experienced software engineers.

AI/ML Projects

Real-time Object Detection System for Autonomous Vehicles (Personal Project): Developed a real-time object detection system using YOLOv5 and OpenCV, achieving high accuracy and speed on a variety of datasets. Deployed the system on a Raspberry Pi for testing on a small-scale autonomous vehicle.

Sentiment Analysis of Social Media Data (Personal Project): Built a sentiment analysis model using Hugging Face Transformers and Python to analyze large volumes of social media data, identifying trends and patterns in public opinion. Developed a web application to visualize the results.

Image Classification using Transfer Learning (Academic Project): Utilized transfer learning techniques with pre-trained models on ImageNet to build a

highly accurate image classification model for a custom dataset of plant species.
Achieved 95% accuracy on unseen data.
