Professional Summary

Highly motivated and results-oriented Machine Learning Research Fellow with 3+ years of experience at Aetherium Analytics, specializing in the development and deployment of cutting-edge AI/ML solutions. Proven ability to design, implement, and evaluate complex machine learning models using a variety of programming languages and frameworks. Passionate about leveraging AI to solve challenging real-world problems and contributing to the advancement of the field. Strong analytical and problem-solving skills with a demonstrated ability to work independently and collaboratively within a team environment.

Education

Carnegie Mellon University, Pittsburgh, PA * **Doctor of Philosophy (Ph.D.), Machine Learning**, May 2020 * Dissertation: "Novel Architectures for Robust and Explainable Deep Learning in Time Series Analysis" * GPA: 3.9/4.0 * **Master of Science (M.S.), Computer Science**, May 2017 * GPA: 3.8/4.0

Technical Skills

Programming Languages: C++, Java, Go, Python (NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch)

Machine Learning Frameworks: Keras, TensorFlow, PyTorch, Hugging Face Transformers, scikit-learn, XGBoost

Cloud Computing: AWS (EC2, S3, Lambda, SageMaker), Google Cloud Platform (GCP) – basic familiarity

Databases: SQL, NoSQL (MongoDB)

Version Control: Git

Other: Docker, Kubernetes (basic familiarity), Linux

Professional Experience

Machine Learning Research Fellow | Aetherium Analytics | Pittsburgh, PA | June 2020 – Present

- Led the development and deployment of a novel deep learning model for anomaly detection in financial transactions, resulting in a 15% reduction in fraudulent activities.
- Designed and implemented a real-time recommendation system using collaborative filtering and deep reinforcement learning, increasing user engagement by 20%.
- Conducted extensive research on explainable AI (XAI) techniques and applied them to improve the transparency and interpretability of machine learning models.
- Mentored junior researchers and provided technical guidance on various AI/ML projects.
- Contributed to the development of internal AI/ML tools and pipelines.
- Published research findings in top-tier machine learning conferences and journals.

Graduate Research Assistant | Carnegie Mellon University | Pittsburgh, PA | August 2017 – May 2020

- Assisted Professor David Chen in research on deep learning for natural language processing.
- Developed and implemented several deep learning models for tasks such as text classification, sentiment analysis, and machine translation.
- Contributed to the development of open-source software packages for deep learning.

AI/ML Projects

Anomaly Detection in Financial Transactions: Developed a deep autoencoder model for detecting anomalous transactions in a large dataset of financial transactions. Achieved 95% accuracy in identifying fraudulent activities. Utilized TensorFlow and deployed on AWS SageMaker.

Real-time Recommendation System: Designed and implemented a real-time recommendation system using collaborative filtering and deep reinforcement learning. Improved user engagement by 20%. Utilized Python, Keras, and deployed on AWS EC2.

Explainable AI for Credit Risk Assessment: Developed an XAI framework for interpreting the predictions of a credit risk assessment model. Improved the

transparency and interpretability of the model, leading to increased trust and adoption by stakeholders. Utilized Python, SHAP values, and LIME.

Natural Language Processing for Sentiment Analysis: Developed a BERT-based model for sentiment analysis of customer reviews. Achieved state-of-the-art results on a benchmark dataset. Utilized Hugging Face Transformers and Python.
