Professional Summary

Highly accomplished and results-oriented Senior AI Engineer with 8+ years of experience at Veridian Dynamics, specializing in the design, development, and deployment of machine learning models across diverse applications. Proven ability to leverage advanced techniques in deep learning, natural language processing, and computer vision to solve complex business problems. Expertise in Go, Python, R, Keras, TensorFlow, and Google Cloud Platform (GCP). Passionate about pushing the boundaries of AI and contributing to innovative solutions with a strong focus on scalability and efficiency.

Education

Carnegie Mellon University, Pittsburgh, PA

*Master of Science in Artificial Intelligence, May 2015 * Bachelor of Science in*

Computer Science, May 2013 * GPA: 3.9/4.0 * Dean's List: All Semesters*

Technical Skills

Programming Languages: Go, Python, R, Java, C++ **Machine Learning**

Frameworks: TensorFlow, Keras, PyTorch, scikit-learn **Cloud Platforms:** Google Cloud Platform (GCP) (Compute Engine, Cloud Storage, BigQuery, Dataflow), AWS (S3, EC2) **Databases:** SQL, NoSQL (MongoDB, Cassandra) **Big Data Technologies:**

Spark, Hadoop **Version Control:** Git **Other:** Docker, Kubernetes, Agile methodologies

Professional Experience

Veridian Dynamics, Pittsburgh, PA

Senior AI Engineer | June 2017 – Present

- Led the development and deployment of a real-time fraud detection system using TensorFlow and GCP, resulting in a 25% reduction in fraudulent transactions.
- Designed and implemented a novel deep learning model for natural language processing, improving the accuracy of sentiment analysis by 15%.
- Mentored junior engineers in best practices for AI/ML development and deployment.
- Spearheaded the adoption of Go for high-performance backend services, improving system throughput by 30%.
- Contributed to the development of a scalable machine learning platform using Kubernetes and Docker.
- Successfully secured two patents related to AI-driven anomaly detection.

Innovatech Solutions, Pittsburgh, PA

Machine Learning Engineer | June 2015 – June 2017

- Developed and deployed machine learning models for various clients in the finance and healthcare industries.
- Utilized R and Python to build predictive models for customer churn and risk assessment.
- Implemented data pipelines using Spark and Hadoop to process large datasets.
- Collaborated with cross-functional teams to define project requirements and deliver solutions.

AI/ML Projects

Real-time Fraud Detection System (Veridian Dynamics): Developed a real-time fraud detection system using TensorFlow and GCP that analyzes transaction data to identify and prevent fraudulent activities. The system utilizes a combination of supervised and unsupervised learning techniques to detect anomalies and patterns indicative of fraud. Key technologies used include TensorFlow, GCP, and Go.

Sentiment Analysis Engine (Veridian Dynamics): Designed and implemented a deep learning model for sentiment analysis that significantly improved the accuracy of identifying positive, negative, and neutral sentiments in text data. The model utilizes a combination of recurrent neural networks and convolutional neural networks. Key technologies used include TensorFlow, Keras, and Python.

Predictive Maintenance Model (Innovatech Solutions): Developed a predictive maintenance model for industrial equipment using time series analysis and machine learning. The model accurately predicts equipment failures, allowing for proactive maintenance and reducing downtime. Key technologies used include R, Python, and scikit-learn.
