Professional Summary

Highly motivated and results-oriented Machine Learning Research Fellow at Quantum Horizon Corp. with a proven track record in developing and implementing innovative AI/ML solutions. Possessing a strong academic background from Imperial College London and expertise in various programming languages and machine learning frameworks, I am adept at tackling complex problems and delivering impactful results. Passionate about pushing the boundaries of AI and contributing to cutting-edge research in the field. Seeking a challenging and rewarding role where I can leverage my skills and experience to contribute to the success of a dynamic organization.

Education

- **Imperial College London, London, UK**
 - M.Sc. in Artificial Intelligence, First Class Honours (2020)
 - Dissertation: "Novel Deep Learning Architectures for Anomaly Detection in High-Frequency Financial Data"
- **Imperial College London, London, UK**
 - B.Sc. in Computer Science, First Class Honours (2018)

Technical Skills

- **Programming Languages:** C++, Go, Python (NumPy, Pandas, SciPy), R
- **Machine Learning Frameworks:** TensorFlow, Keras, PyTorch, Scikit-learn, XGBoost, LightGBM
- **Cloud Computing:** Microsoft Azure (Azure Machine Learning, Azure Databricks), AWS (Amazon SageMaker), Google Cloud Platform (GCP)
- **Databases:** SQL, NoSQL (MongoDB)
- **Big Data Technologies:** Spark, Hadoop
- **Version Control:** Git
- **Operating Systems:** Linux, Windows, macOS

Professional Experience

- **Machine Learning Research Fellow, Quantum Horizon Corp., London, UK (2022 – Present)**
 - Developed and implemented novel deep learning models for natural language processing, achieving a 15% improvement in sentiment analysis accuracy compared to existing state-of-the-art models.
 - Led a team of junior researchers in the design and execution of A/B testing for a new recommendation system, resulting in a 10% increase in user engagement.
 - Contributed to the development of a proprietary AI platform for fraud detection, significantly reducing false positives and improving overall system efficiency.
 - Published research findings in leading AI/ML conferences and journals.
- **AI/ML Intern, TechNova Solutions, London, UK (Summer 2021)**
 - Developed a machine learning model for predicting customer churn, resulting in a 5% reduction in churn rate.
 - Implemented a real-time data processing pipeline using Apache Kafka and Spark.
 - Assisted senior engineers in deploying machine learning models to production.

AI/ML Projects

- **Anomaly Detection in Financial Time Series:** Developed a novel deep learning architecture for detecting anomalies in high-frequency financial data, resulting in a publication in the Journal of Financial Econometrics. Utilized LSTM networks and autoencoders. (GitHub repository available upon request)
- **Sentiment Analysis of Social Media Data:** Built a robust sentiment analysis model using BERT and other transformer-based architectures, achieving state-of-the-art performance on benchmark datasets. (GitHub repository available upon request)
- **Image Classification using Convolutional Neural Networks:** Developed a high-accuracy image classification model using convolutional neural networks (CNNs) for a variety of image datasets, including CIFAR-10 and ImageNet. (GitHub repository available upon request)
- **Recommendation System using Collaborative Filtering:** Implemented a collaborative filtering-based recommendation system using matrix factorization techniques, achieving a significant improvement in recommendation accuracy. (GitHub repository available upon request)
