Professional Summary

Highly motivated and results-oriented Machine Learning Research Fellow with 3+ years of experience at Aetherium Analytics, specializing in developing and deploying innovative AI/ML solutions. Proven ability to translate complex research into practical applications, leveraging expertise in deep learning, natural language processing, and cloud computing. Seeking a challenging role where I can contribute my skills and passion for advancing the field of artificial intelligence.

Education

- **University of Oxford, Oxford, UK**
 - Doctor of Philosophy (PhD), Computer Science, 2020
 - Dissertation: "Novel Applications of Deep Reinforcement Learning in Resource Allocation for Cloud Computing"
 - Master of Science (MSc), Computer Science, 2018
 - Bachelor of Science (BSc), Mathematics and Computer Science, 2016

Technical Skills

- **Programming Languages:** Python (expert), R (proficient), Java (proficient), C++ (intermediate)
- **Machine Learning Libraries & Frameworks:** TensorFlow/Keras (expert), PyTorch (expert), Scikit-learn (proficient), XGBoost (proficient)
- **Cloud Computing:** Microsoft Azure (expert), AWS (intermediate), Google Cloud Platform (basic)
- **Databases:** SQL (proficient), NoSQL (intermediate)
- **Big Data Technologies:** Spark (intermediate), Hadoop (basic)
- **Version Control:** Git (expert)

Professional Experience

- **Machine Learning Research Fellow, Aetherium Analytics, London, UK | 2020 – Present**
 - Led the development and deployment of a novel deep learning model for fraud detection, resulting in a 15% reduction in fraudulent transactions.
 - Designed and implemented a real-time anomaly detection system using LSTM networks, improving system stability by 20%.
 - Conducted extensive research on explainable AI (XAI) techniques and applied them to improve the transparency and interpretability of machine learning models.

- Mentored junior researchers and provided technical guidance on various AI/ML projects.
- Published research findings in peer-reviewed conferences and journals.
- **Research Assistant, University of Oxford, Oxford, UK | 2018 – 2020**
 - Assisted Professor David Miller with research on reinforcement learning algorithms for robotics.
 - Developed and implemented several simulation environments for testing and evaluating reinforcement learning agents.
 - Contributed to the development of a novel algorithm for multi-agent reinforcement learning.

AI/ML Projects

- **Fraud Detection System (Aetherium Analytics):** Developed a deep learning model using a convolutional neural network (CNN) and recurrent neural network (RNN) architecture to detect fraudulent transactions in real-time. Achieved 95% accuracy in identifying fraudulent transactions. Utilized Azure Machine Learning services for deployment.
- **Real-time Anomaly Detection System (Aetherium Analytics):** Implemented an LSTM-based anomaly detection system for monitoring server performance. The system automatically identifies and alerts on unusual patterns in server activity, preventing system failures. Deployed on Azure Kubernetes Service (AKS).
- **Explainable AI for Loan Application Scoring (Aetherium Analytics):** Developed an XAI system to explain the predictions of a loan application scoring model. Used SHAP values and LIME to provide insights into the factors that influence loan approval decisions.
- **Multi-Agent Reinforcement Learning for Traffic Optimization (University of Oxford):** Developed a multi-agent reinforcement learning algorithm for optimizing traffic flow in a simulated urban environment. The algorithm significantly reduced congestion and improved travel times.
