Portfolio

Profile Summary	Results-driven Data Science and Machine Learning enthusiast with a strong foundation in machine learning algorithms, deep learning, computer vision, and natural language processing (NLP). Highly proficient in developing AI-driven solutions for image recognition, object detection. Proven experience in leading projects and hackathons, solving real-world problems through data-driven insights and cutting-edge technology.		
Area of Interests	Machine Learning, Data Science, Deep Learning, Computer Vision, Natural Language Processing, Mathematics, Reinforcement Learning, and Robotics.		
Education	Diploma in Information Technology (CGPA - 9.22/10.00)	September 2021 - June 2024	
	Gujarat Technological University (GTU), Gujarat, India.		
	BS in Data Science and Application	June 2024 - 2028	
	Indian Institute of Technology, Madras.		
Technical Skills	Software & Tools		
	• Ubuntu, Google Colab, Jupyter Notebook, Anaconda, Android Studio, Shell Script		
	Languages		
	• Python, Java, Javascript.		
	Libraries & Frameworks		
	• Numpy, Pandas, Matplotlib, Scikit-learn, Seaborn, Pytorch, Tensorflow, Langchain, OpenCV, Fast.ai, FastAPI, Django, Flask.		
Publication	Open-Source Contribution to Natural Instruction Expansion Project by AllenAI October, 2021 Contributed to the development of benchmark tasks for measuring generalization in unseen task completion. (Link)		
Internship Experience	Data Science and Machine Learning at Snapfix	July - August, 2023	
	Ahmedabad, Gujarat, India		
	• Built foundational expertise in data science by applying essential tools to address real-world data challenges and strengthen analytical skills. (Link)		
	Indian Land Cover at Indian Institute of Technology Patna	December 2022 - May 2023	
	Virtual		
	• Contributed to the project by accurately classifying and annotating land cover classes, enhancing data quality and supporting robust analysis for environmental studies. (Link)		
	Big Data Analyst at MICA	April - July, 2021	
	Ahmedabad, Gujarat, India		
	• Developed a comprehensive pipeline for processing and analyzing academic video lectures, leveraging Speech-to-Text APIs. Conducted data cleaning, pre-processing, and post-processing to optimize input for machine learning models, enhancing the accuracy and effectiveness of analyses. (Link)		
FreeLancing Project	Annotation Specialist to Summarize Documents at Adobe		
	• Reviewed and summarized over 1000 lengthy documents, including news articles and transcripts, distilling complex information into concise, high-impact summaries for enhanced readability and comprehension. (Link))		
	Machine Reading with Background Knowledge Annotation at AllenAI		
	• Streamlined data annotation for the Machine Reading with Background Knowledge system, enhancing question-specific annotation efficiency.		

Achievements

Student Co-creation Award: Award for Outstanding Innovation and Leadership, received for my idea, Gesture Lingo. ([Link](#))

Winner of NU-Tech 2025: Secured first place in the 24-hour Hackathon at Noble University. ([Link](#))

Expert Guest Lecturer: Delivered a lecture on Artificial Intelligence and Machine Learning for the Dotenv Community. ([Link](#))

NASA Space Apps Challenge 2024: Led a team of 6 members, driving innovative solutions for global space exploration challenges. ([Link](#))

Top 10 in HackOut'24: Shortlisted among 450 competing teams for our innovative approach to space exploration technology. ([Link](#))

Gesture Lingo Grant: Awarded a grant of 15,600 by the Student Startup Innovation Policy (SSIP) to recognize the Gesture Lingo project. ([Link](#))

New India Vibrant Hackathon 2023 Finalist: Led a team to the grand finale in the SSIP-organized hackathon, securing a position among the top 181 teams from an initial pool of 1,400, demonstrating strong leadership and collaborative problem-solving skills. ([Link](#))

1st Runner Up - Relay Coding: Secured 1st Runner-Up position in the Relay Coding Competition at RK University, demonstrating exceptional teamwork and technical skills. ([Link](#))

Top 5% in Spaceship Titanic Competition: Achieved a top 5% rank in the Kaggle competition, with detailed insights and approach showcased in the notebook. ([Link](#))

Projects

Multi-Agent-Medical-Chatbot June 2025
A comprehensive, modular healthcare chatbot system built using LangGraph, designed to deliver intelligent, context-aware, and collaborative medical assistance. ([Link](#))

Rocket Launch Delay Analysis January 2025
Analyzed factors influencing rocket launch delays using historical data and predictive modeling to identify trends and causes of schedule disruptions. ([Link](#))

Projects on RAG Pipelines
Developed multiple AI-driven applications using Retrieval-Augmented Generation (RAG) pipelines:

AI Lawyer Chatbot – ([Link](#))
Labor Worker Chatbot API – ([Link](#))
Exoplanet Fact Generator – ([Link](#))

SurfaceScout August 2024
Developed a model for lunar surface classification using a pre-trained Vision Transformer (ViT) model. Integrated rock detection with bounding boxes for improved accuracy. ([Link](#))

Staff Scan November 2023
Created an Android app for attendance management, as part of New Vibrant Hackathon 2023. Implemented user authentication and tracking features for efficient staff monitoring. ([Link](#))

Face Recognition Attendance October 2023
Developed a Python-based real-time facial recognition system for attendance tracking, improving efficiency and automating attendance management processes. ([Link](#))

Cosmic Philosopher November 2020
Created a bot that generates philosophical quotes tailored to user input, incorporating insights from renowned philosophers, authors, and poets to inspire and engage users. ([Link](#))
