Professional Summary

Highly accomplished and results-oriented Senior AI Engineer with 8+ years of experience at Synthetica Global, specializing in the development and implementation of cutting-edge machine learning solutions. Proven ability to lead and mentor teams, design innovative algorithms, and deliver high-impact projects across diverse industries. Expertise in deep learning, natural language processing, and computer vision, coupled with strong programming skills in C++, Java, Go, and proficiency in utilizing AWS cloud services and popular ML libraries like Keras and Scikit-learn. Passionate about leveraging AI to solve complex real-world problems and drive significant business value.

Education

University of Oxford, Oxford, UK * **Doctor of Philosophy (PhD) in Computer Science**, 2015 * Dissertation: "Novel Deep Learning Architectures for Time Series Anomaly Detection" * **Master of Science (MSc) in Computer Science**, 2013 * **Bachelor of Science (BSc) in Mathematics and Computer Science**, 2011

Technical Skills

Programming Languages: C++, Java, Go, Python (NumPy, Pandas, SciPy) **Machine Learning Libraries:** TensorFlow, Keras, PyTorch, Scikit-learn, XGBoost **Cloud Computing:** AWS (EC2, S3, Lambda, RDS), Google Cloud Platform (GCP) (basic familiarity) **Databases:** SQL, NoSQL (MongoDB) **Big Data Technologies:** Spark, Hadoop (familiarity) **Version Control:** Git **Operating Systems:** Linux, macOS, Windows

Professional Experience

Synthetica Global, London, UK **Senior AI Engineer** | June 2018 – Present * Led the development and deployment of a real-time fraud detection system using deep learning, resulting in a 25% reduction in fraudulent transactions. * Mentored and trained junior engineers in best practices for AI development and deployment. * Designed and implemented a novel algorithm for image recognition that

improved accuracy by 15% compared to existing solutions. * Successfully secured a \$2M grant for research and development of AI-powered predictive maintenance software. * Collaborated with cross-functional teams (product, engineering, marketing) to define project scope, manage timelines, and deliver high-quality results.

Innovatech Solutions, London, UK AI Engineer | July 2015 – June 2018 *

Developed and deployed several machine learning models for various clients, including a customer churn prediction model for a telecommunications company and a recommendation system for an e-commerce platform. * Conducted extensive data analysis and feature engineering to improve model performance. * Implemented and maintained robust data pipelines using various big data technologies. * Contributed to the development of internal AI tools and frameworks.

AI/ML Projects

Real-time Fraud Detection System (Synthetica Global): Developed a deep learning-based system for detecting fraudulent transactions in real-time. Utilized LSTM networks and anomaly detection techniques to achieve high accuracy and low latency. Deployed on AWS using serverless architecture.

Image Recognition System (Synthetica Global): Designed a novel convolutional neural network (CNN) architecture for image recognition, achieving state-of-the-art results on a benchmark dataset. Implemented techniques for data augmentation and transfer learning to improve model robustness and generalization.

Customer Churn Prediction Model (Innovatech Solutions): Built a machine learning model to predict customer churn for a telecommunications company. Used logistic regression, random forests, and gradient boosting machines to achieve high prediction accuracy. Improved customer retention strategies by identifying at-risk customers.

Recommendation System (Innovatech Solutions): Developed a collaborative filtering-based recommendation system for an e-commerce platform. Utilized matrix factorization techniques to improve recommendation accuracy and personalization. Increased sales conversions by 10%.
